FOREWORD

The statistical book contains main indicators characterizing the agricultural sector of the Republic of Belarus for 2010 – 2017. Selected data are provided for a lengthier period.

The statistical book is prepared on the basis of data of exhaustive and sample state statistical surveys as well as administrative data.

The statistical book contains data on the main indicators of agricultural development: agricultural production, production structure of main agricultural products, per capita agricultural production.

The substantial place is given to crop growing and animal husbandry indicators. This publication includes data on agricultural area and its structure by types of farms; area under crops, gross harvest, yield capacity of agricultural crops and perennial plantations. The data on livestock and poultry population, production of main animal products are also included.

Separate section of the publication contains information on agricultural facilities: data on fixed capital investment, production and availability of agricultural machinery.

There are also data on production of basic products of food industry, foreign trade in food goods, consumption of basic food products.

The book also includes data characterizing financial standing of organisations, average prices of agricultural products sold.

The data are presented at the national and regional levels with selected indicators broken down by district.

The data book provides selected indicators to monitor progress towards the Sustainable Development Goals.

Starting from 2016 the information by economic activity is provided in accordance with the national classification of the Republic of Belarus ОКРБ 005-2011 "Kinds of economic activity". To ensure comparability, data by economic activity for 2010 – 2015 have been converted accordingly based on the new version of the classification.

Value indicators for 2016 and 2017 are provided in terms of the new denomination effective from 1 July 2016 (1 BYN = 10 000 BYR); data for other years are provided in terms of the denomination of corresponding years (BYR).

In several cases the 2017 data are preliminary and are subject to revision in further issues.

Abbreviations:

thous.	- thousand	hp	- horse power	m ²	- square metre
bn.	- billion	kg	- kilogramme	dal	- decalitre
mln.	- million	ha	- hectare		

Explanation of symbols:

- not applicable
- 0,0 negligible magnitude
- ... data not available

In several cases insignificant discrepancies between the total and the sum of its components is explained by data rounding.

Relative ratios are calculated on the basis of absolute numbers with smaller units of measure than those presented in the tables.

CONTENTS

	Pg.
1. Main socio-economic indicators	
1.1. Main socio-economic indicators for years 2010 – 2017	12
1.2. Selected indicators of Goal 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture of the National SDG Indicator Framework	15
2. Characteristics of economic entities	
2.1. Agricultural organisations and private farms by region	16
2.2. Agricultural organisations by legal organisational form.	17
2.3. Agricultural organisations by ownership	18
3. Employment	
3.1. Number of employees in agriculture by educational attainment and age groups.	19
3.2. Payroll number of employees in organisations by region	20
3.3. Nominal gross average monthly earnings of employees by region	21
3.4. Real earnings of employees by region	22
3.5. Graduates from secondary specialised and higher education programmes with specialty in “Agriculture”	23
3.6. Occupational injuries in agricultural organisations.	23
4. Main indicators of agriculture	
4.1. Agricultural output by type of farm.	25
4.2. Structure of agricultural output by type of farm.	26
4.3. Structure of agricultural output by type of output and type of farm.	26
4.4. Indices of agricultural output	27
4.5. Indices of crop output.	27
4.6. Indices of animal output.	28
4.7. Structure of agricultural output by type in farms of all types	28
4.8. Structure of production of basic agricultural products by type of farm	29
4.9. Indices of agricultural output in farms of all types by region	30
4.10. Agricultural production per capita.	31
4.11. Main indicators of agricultural organisations activity.	32
4.12. Main indicators of private (peasant) farms activity.	33
4.13. Main indicators of household activities.	34
5. Physical Resources of agriculture	
5.1. Manufacture of basic agricultural machinery	36
5.2. Number of basic agricultural machinery and equipment in agricultural organisations	37
5.3. Number of basic agricultural machinery and equipment in agricultural organisations by region	38

	Pg.
5.4. Availability of tractors and combine harvesters in agricultural organisations	40
5.5. Production of mineral fertilizers	40
5.6. Application of mineral fertilizers in agricultural organisations	41
5.7. Application of mineral fertilizers in agricultural organisations by region	42
5.8. Application of organic fertilizers in agricultural organisations	46
5.9. Application of mineral and organic fertilizers per hectare of ploughland in agricultural organisations (graph)	46
5.10. Application of organic fertilizers in agricultural organisations by region	47
5.11. Liming of soils in agricultural organisations	48
5.12. Power capacity in agricultural organisations	48
5.13. Fixed capital investment in agriculture	48
5.14. Commissioning of production facilities	49
6. Crop growing	
6.1. Agricultural land by land user	50
6.2. Structure of agricultural land by land user	51
6.3. Reclaimed land	52
6.4. Fruit gardening and summer house (dacha) construction	52
6.5. Vegetable gardening	53
6.6. Sown area under basic agricultural crops in farms of all types	53
6.7. Sown area under agricultural crops by crop and type of farm	54
6.8. Structure of sown area under agricultural crops by crop and type of farm	57
6.9. Sown area under grains and legumes in farms of all types	60
6.10. Area of fruit and berries plantations by type of farm	60
6.11. Sown area under agricultural crops on reclaimed land in agricultural organisations . .	61
6.12. Total sown area under agricultural crops by type of farm by region	62
6.13. Sown area under grains and legumes by type of farm by region	63
6.14. Sown area under rape by type of farm by region	64
6.15. Sown area under sugar beets by type of farm by region	64
6.16. Sown area under flax by type of farm by region	65
6.17. Sown area under potatoes by type of farm by region	66
6.18. Sown area under vegetables by type of farm by region	67
6.19. Sown area under forage crops by type of farm by region	68
6.20. Sown area under basic agricultural crops in agricultural organisations by district . .	69
6.21. Gross harvest of basic agricultural crops	81
6.22. Gross harvest of grains and legumes by type	82
6.23. Yield capacity of basic agricultural crops	83

	Pg.
6.24. Yield capacity of grains and legumes by type	84
6.25. Gross harvest of agricultural crops by crop and type of farm	85
6.26. Yield capacity of agricultural crops by type of farm	87
6.27. Gross harvest of fruits and berries by type of farm	90
6.28. Yield capacity of fruits and berries by type of farm	91
6.29. Gross harvest and yield capacity of grains and legumes in agricultural organisations (graph)	92
6.30. Gross harvest and yield capacity of potatoes in agricultural organisations (graph)	92
6.31. Gross harvest and yield capacity of flax fibre in agricultural organisations (graph)	93
6.32. Gross harvest and yield capacity of sugar beets in agricultural organisations (graph)	93
6.33. Gross harvest and yield capacity of vegetables in agricultural organisations (graph)	94
6.34. Gross harvest and yield capacity of rape in agricultural organisations (graph)	94
6.35. Gross harvest and yield capacity of agricultural crops on reclaimed land in agricultural organisations	95
6.36. Gross harvest of grains and legumes by type of farm by region	96
6.37. Gross harvest of rape by type of farm by region	97
6.38. Gross harvest of sugar beets by type of farm by region	97
6.39. Gross harvest of flax fibre by type of farm by region	98
6.40. Gross harvest of potatoes by type of farm by region	99
6.41. Gross harvest of vegetables by type of farm by region	100
6.42. Gross harvest of fruits and berries by type of farm by region	101
6.43. Yield capacity of grains and legumes by type of farm by region	102
6.44. Yield capacity of rape by type of farm by region	103
6.45. Yield capacity of sugar beets by type of farm by region	103
6.46. Yield capacity of flax fibre by type of farm by region	104
6.47. Yield capacity of potatoes by type of farm by region	105
6.48. Yield capacity of vegetables by type of farm by region	106
6.49. Yield capacity of fruit and berries by type of farm by region	107
6.50. Gross harvest and yield capacity of basic agricultural crops in agricultural organisations by district	108
7. Animal husbandry	
7.1. Livestock population in farms of all types	125
7.2. Basic livestock population by type of farm	126
7.3. Structure of livestock population by type of farm	127
7.4. Number of poultry, rabbits, and bee families by type of farm	128
7.5. Number of basic livestock and poultry by type of farm by region	129
7.6. Number of basic livestock and poultry in agricultural organisations by district	135

	Pg.
7.7. Production of basic animal products in farms of all types	145
7.8. Production of basic animal products by type of farm	146
7.9. Structure of production of basic animal products by type of farm	147
7.10. Sales of livestock and poultry for slaughter by livestock type and type of farm	148
7.11. Structure of sales of livestock and poultry by livestock type and type of farm	149
7.12. Sales of livestock and poultry for slaughter by type of farm by region	150
7.13. Production of milk by type of farm by region	152
7.14. Production of eggs by type of farm by region	153
7.15. Production of wool (physical weight) by type of farm by region	154
7.16. Sales of livestock and poultry for slaughter in agricultural organisations by district ..	155
7.17. Production of milk in agricultural organisations by district	159
7.18. Production of milk and average milk yield per cow in agricultural organisations (graph)	163
7.19. Average milk yield per cow by type of farm	163
7.20. Average milk yield per cow by type of farm by region	164
7.21. Average milk yield per cow in agricultural organisations by district	165
8. Financial standing and prices	
8.1. Main financial indicators of organisations in agriculture	171
8.2. Status of accounts of organisations in agriculture.	172
8.3. Main financial indicators of agricultural organisations by region	174
8.4. Status of accounts of agricultural organisations by region	177
8.5. Profitability of products sold by agricultural organisations	179
8.6. Average agricultural producer prices	180
8.7. Agricultural producer price indices	180
8.8. Price parity index of industrial and agricultural products	180
9. Processing of agricultural products	
9.1. Main indicators of organisations with economic activity in “Manufacture of food, beverages and tobacco products”	182
9.2. Structure of manufacture of food, beverages and tobacco products	183
9.3. Commissioning of production capacities	183
9.4. Manufacture of basic food products and beverages	184
10. Foreign economic activity	
10.1. Volume of foreign trade in agricultural and food products	185
10.2. Share of agricultural and food products in the volume of foreign trade in goods of the Republic of Belarus (graph)	186
10.3. Exports of food products	187
10.4. Imports of food products to the Republic of Belarus	189
10.5. Imports of selected non-food goods to the Republic of Belarus	192

11. Food balance sheets

11.1. Level of self-sufficiency in basic agricultural products	193
11.2. Supply and use of meat and meat products	194
11.3. Supply and use of milk and dairy products	194
11.4. Supply and use of eggs and egg products	195
11.5. Supply and use of fish and fish products	195
11.6. Supply and use of potatoes and potato products.	196
11.7. Supply and use of vegetables and cucurbits and their conversion products	196
11.8. Supply and use of fruits and berries and their conversion products	197
11.9. Consumption of basic food products per capita	197

**12.1. International comparisons
Belarus and CIS countries**

12.1.1. Indices of agricultural production	198
12.1.2. Production of grains and legumes	198
12.1.3. Per capita production of grains and legumes	199
12.1.4. Yield capacity of grains and legumes	199
12.1.5. Production of sugar beets	200
12.1.6. Per capita production of sugar beets	200
12.1.7. Production of potatoes	201
12.1.8. Per capita production of potatoes	201
12.1.9. Yield capacity of potatoes	201
12.1.10. Production of vegetables	202
12.1.11. Per capita production of vegetables	202
12.1.12. Production of fruits and berries (excluding citrus fruit)	203
12.1.13. Per capita production of fruits and berries (excluding citrus fruit)	203
12.1.14. Cattle population.	204
12.1.15. Cow population.	204
12.1.16. Pig population.	205
12.1.17. Sheep and goat population.	205
12.1.18. Production of livestock and poultry for slaughter	206
12.1.19. Per capita production of livestock and poultry for slaughter	206
12.1.20. Production of milk	207
12.1.21. Per capita production of milk	207
12.1.22. Production of eggs	208

	Pg.
12.1.23. Per capita production of eggs	208
12.1.24. Per capita consumption of basic food products.	209
12.2. Belarus and countries of the world	
12.2.1. Republic of Belarus in the world production of selected agricultural products.	211
12.2.2. Indices of agricultural production	211
12.2.3. Production of selected agricultural crops	212
12.2.4. Yield capacity of selected agricultural crops	214
12.2.5. Livestock and poultry population	216
12.2.6. Production of basic animal products	218
12.2.7. Average milk yield per cow	220
13. Service activities in crop growing and animal husbandry	
13.1. Main indicators of organisations engaged in activities to support crop growing and animal breeding.	221
13.2. Organisations engaged in activities to support crop growing and animal breeding by region and Minsk city	222
13.3. Main indicators of organisations engaged in activities to support crop growing and animal breeding by region and Minsk city.	223
13.4. Main financial indicators of organisations engaged in activities to support crop growing and animal breeding.	224
13.5. Status of accounts of organisations engaged in activities to support crop growing and animal breeding.	224
13.6. Main financial indicators of organisations engaged in activities to support crop growing and animal breeding by region and Minsk city.	225
13.7. Status of accounts of organisations engaged in activities to support crop growing and animal breeding by region and Minsk city.	228

1. MAIN SOCIO-ECONOMIC INDICATORS

Current population estimates as of January 1 are based on the results of the last population census plus the annual number of births and arrivals to a given area and minus the annual number of deaths and departures from a given area. The estimates take into account increase or decrease of population in selected areas due to the changes of their boundaries, as well as changes in urban and rural population caused by changes in administrative and territorial system of the Republic of Belarus i.e. changes of a settlement status (rural-to-urban or urban-to-rural transformation under legislative acts).

Resident population refers to individuals who permanently reside in a given area as well as foreign nationals and stateless persons who temporarily reside in a given area for a year or more.

The population is classified into urban and rural according to the place of residence. In this respect, urban settlements refer to localities that were granted an urban status in compliance with the legislation (cities, urban, industrial and resort settlements). All other settlements are rural.

Payroll number of employees includes employees who worked under employment agreements (contracts) and performed permanent, temporary or seasonal work for a day or more. This includes both actually working employees and persons temporarily absent from work for any reason (annual leave, a leave initiated by employer, temporary disability, or other reason). External multiple job holders and civil-law contractors are not included.

Average annual payroll number of employees is a sum of average monthly number of employees for all months ended from the beginning of the year divided by 12. Average annual payroll number of employees does not include employees on maternity leave, on a leave connected with the adoption of a child under 3 months of age, and a child care leave up to the age of three years.

Nominal gross average monthly earnings are calculated by dividing the gross payroll, including income tax and compulsory insurance contributions of employees, by the average payroll number of employees used for the calculation of the average earnings and by the number of months in the period.

Real earnings is a relative statistical measure characterizing the purchasing power of earnings in the reference period in connection with the changes in prices of consumer goods and services compared with the base period. It is calculated by dividing the nominal gross earnings index by the consumer price index for the same time period.

Gross Domestic Product (GDP) reflects the value of goods and services produced in the country by all types of economic activities and intended for final consumption, capital formation and net exports. GDP by production approach is calculated as the sum of gross values added by economic activities and net taxes on products.

Gross value added reflects the difference between output and intermediate consumption calculated by economic activities.

The Sustainable Development Goals (SDGs): The 2030 Agenda for Sustainable Development is a set of interrelated and inseparable sustainable development goals and targets. These goals are planned to be achieved until 2030. The Sustainable Development Goals contain 17 global goals. To monitor the progress in achieving each goal, a list of relevant indicators was developed.

The data book presents selected indicators of Goal 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture:

Number of plant and animal genetic resources for food and agriculture secured in either medium- or long-term conservation facilities;

The agriculture orientation index for government expenditures; calculated as a ratio of the proportion of agriculture in government spending to the proportion of agriculture in GDP, where agriculture covers agriculture, forestry and fishing sector;

Total official flows (official development assistance plus other official flows) to the agriculture sector.

Fixed capital investment reflects the total costs invested in the acquisition, reproduction and creation of new fixed assets.

Labour productivity in agriculture per employee is measured as a ratio of the output produced in agricultural organisations at current prices to the average payroll number of employees engaged in agricultural production. The index of labour productivity is calculated as a ratio of the index of agricultural output at constant prices to the index of changes in the average payroll number of employees engaged in agricultural production.

4. MAIN INDICATORS OF AGRICULTURE

Agricultural output is the total value of material goods produced in the sector both for sale and for internal consumption. Agricultural output includes the value of animal husbandry and crop-growing products, and change in the value of work-in-progress in crop growing.

Crop growing output is the value of raw products obtained from the harvest of the reference year (cereals and legumes, oil seeds, potatoes, sugar beets, flax fibre, forage crops, vegetables, fruits and berries, planting stock (nursery plants), flower products, mushrooms, etc.), value of planting young perennial plantations, changes in the value of work-in-progress in crop growing (costs associated with work done in the reference year for the harvest of the next year (sowing of winter crops, fall-ploughing, etc.).

Animal husbandry output is the value of raw products obtained as a result of raising and economic use of farm animals and poultry (milk, eggs, honey, wool, etc.), expenses related to raising of farm animals and poultry (crop, growth and weight gain), the value of young stock sold for breeding.

Index of agricultural output is a relative statistical measure reflecting changes in agricultural output in the periods compared (in constant prices).

Farms of all types means all groups of agricultural producers. They include:

agricultural organisations defined as legal entities (excluding private farms), their subdivisions with separate balance and main and/ or secondary economic activity in agriculture, excluding provision of services in crop growing and animal husbandry (according to National Classification of Economic Activities of the Republic of Belarus (OKRB 005-2011), groups 011 – 015;

private farms;

household subsidiary plots which are personal subsidiary plots of permanent rural residents, subsidiary plots of individuals, engaged in agricultural production using land plots allotted for construction and/ or maintenance of single-family, terraced residential houses, collective gardening or dacha (summer house) construction.

5. PHYSICAL RESOURCES OF AGRICULTURE

Availability of specific agricultural machinery in agricultural organisations is a ratio of the number of related machinery as of the end of the year to the sown area (ploughland) under corresponding agricultural crops. Calculated per 1000 hectares of sown area (plough land).

Load rate on agricultural machinery is a ratio of plough land or sown area of agricultural crops to the number of agricultural machinery. Calculated per unit of corresponding type of agricultural machinery.

Power capacity in agricultural organisations is the total capacity of all energy sources supporting production process – mechanical and electric motors, electricity generating plants, and animal draught power.

Power supplied per worker in agricultural organisations is a ratio of total power capacities to the average annual number of workers engaged in agricultural production.

Power supply in agricultural organisations is the ratio of total power capacities to sown area of agricultural crops. Calculated per 100 hectares of sown area.

Fixed capital investment are total costs invested in the acquisition, reproduction and creation of new fixed assets.

5.1. Manufacture of basic agricultural machinery

6. CROP GROWING

Agricultural land is land regularly used for obtaining agricultural products. It includes arable land, fallow land, land under permanent crops, and meadow land. The data are provided by the State Committee for Property of the Republic of Belarus.

Arable land is agricultural land regularly cultivated (plowed) and used under agricultural crops, including perennial grass with period of use specified by the scheme of crop rotation as well as emergency fields, soil area under cover (greenhouses), and clean fallow.

Land under permanent crops is land covered with artificial trees and shrubs (plantations) or plantations of herbaceous perennial plants, intended for fruit harvest, food, technical and medicinal plants, as well as for landscaping.

Sown area is a part of arable land under agricultural crops.

Gross harvest of agricultural crops is the output produced (harvested) from the total sown area under agricultural crops. Gross harvest of grains and legumes is measured in weight after treatment.

Yield capacity of agricultural crops is the average harvest of agricultural products per unit of actually harvested area (per hectare).

7. ANIMAL HUSBANDRY

Livestock and poultry population is the number of farm animals – cattle, pigs, sheep, goats, horses and others as well as poultry of all species.

Sales of livestock and poultry for slaughter (in live weight) are sales of all types of livestock and poultry for slaughter through various distribution channels – to meat processing organisations and cool storage facilities; subsidiary production units of organisations; consumers' cooperatives; distributed or sold through catering facilities; sold on the markets or through other distribution channels.

Production of milk is actually yielded milk, including milk consumed in the farms for their own needs. Milk suckled by calves in sucking maintenance is not included.

Average milk yield per cow is calculated as a ratio of milk yielded from dairy heard cows to the average dairy herd population regardless of whether the cows milked or not in the reference period.

Production of eggs is eggs gathered from all kinds of farm poultry, including eggs used for poultry reproduction (incubation), production of egg powder, etc. as well as loss of eggs (breakage, spoilage, etc.)

7.1. Livestock population in farms of all types

8. FINANCIAL STANDING AND PRICES

Financial indicators are provided for agricultural organisations (organisations with principal economic activity in crop growing and/or animal husbandry). Tables 8.1 and 8.2 include also data on small businesses and private farms.

Revenues from sales of products, goods, works and services are funds or other assets in monetary form received or receivable from sales of products, goods, works and services, in case of their recognition as a revenue in accordance with the legislation, for the main revenue-generating activity.

Net cost of products, goods, works and services sold means costs incurred to produce products, perform work and provide services related to the products, goods, works and services sold; sales costs, administrative expenses, and acquisition cost of goods sold.

Profit, loss (-) from sales of products, goods, works and services is the financial result from sales of products, goods, works and services defined as the difference between the sales revenues and net cost of products, goods, works and services sold and taxes and charges payable from revenues.

Profit, loss (-) before tax is the total financial result from operating, investment and financial activities.

Net profit, loss (-) is the final financial result of the company's activity for the reference period defined as a sum of profit (loss) from operating, investment and financial activities reduced by the sum of taxes and charges as well as sums payable from profit taking into account changes in deferred tax assets and liabilities.

Profitability of products, goods, works, and services sold is calculated as a ratio of profit from sales of products, goods, works and services to the net cost of products, goods, works and services sold. A negative financial result from sales of products, goods, works and services means operating at a loss.

Profitability of sales is calculated as a ratio of profit from sales of products, goods, works and services to the revenue from sales of products, goods, works and service. A negative financial result from sales of products, goods, works and services means operating at a loss.

A loss-making organisation is an organisation having net loss over the reference period.

Accounts payable are liabilities to suppliers and contractors for tangible assets received, works done and services provided; on advance payments received; with affiliated organisations, with personnel on wage payments, with budget and extrabudgetary funds, and other creditors.

Accounts receivable are liabilities of customers for goods, works and services; on bills of exchange received; of affiliated organisations, budget, personnel, and other debtors (including liabilities of accountable persons, advance payments granted to suppliers and contractors, and liabilities of other debtors).

Overdue indebtedness is debts that have not been repaid when due as specified by contracts and legislative acts.

Agricultural producer price index reflects changes in prices of agricultural products produced by domestic companies and sold in the domestic market, excluding value added tax and transportation, loading and uploading costs, but including bonuses and discounts for quality.

The state statistical observation of prices of agricultural producers is based on the sample of reference organisations in agriculture. The sample of reference agricultural organisations includes major agricultural producers which have a significant share in the sales of agricultural products and a definite specialty.

At present, the sample includes around 840 organisations. State sample statistical observation on agricultural producer prices covers more than 8000 kinds of specific products.

The aggregated agricultural producer price index is calculated by economic activity as well as separately by product type (subtype). The aggregated agricultural producer price index is computed by regions and at the level of the country.

In order to eliminate the effects of structural changes in production and sales of agricultural products caused by biological and climatic factors, the average value of products sales for three years preceding the reference year is taken as a base period.

Price parity index of industrial and agricultural products (price parity index of industrial products, works and services consumed by agricultural organisations and sold agricultural products) reflects the proportion between changes in prices of industrial products and services consumed in agricultural production, and prices of sold agricultural products. It is used to analyse trade conditions and to correct pricing policies in agriculture.

Price parity index of industrial and agricultural products	96.4	89.8	100.6	117.3	94.1	108.8	101.7	93.8

9. PROCESSING OF AGRICULTURAL PRODUCTS

The volume of industrial production by economic activity "Manufacture of food, beverages and tobacco products" is a sum of finished and semi-finished products, works performed, services provided by the personnel of the organisation, intended for sales (made to order) to other organisations, population, non-industrial units of the organisation.

The volume of production of food, beverages and tobacco products is given without the cost of intrafactory turnover, in actual sales prices effective in the corresponding year, less taxes and fees calculated from the revenues and transportation costs for the delivery of products from the departure to the destination station, including the funds received from the budget in connection with the state regulation of prices and tariffs, to cover losses, to recover the cost of production and the cost of raw materials processed under contracts (unpaid).

Intrafactory turnover is the value of that part of finished and semi-finished products manufactured by the organisation, which are used for own industrial needs within the organisation and the value of which is included in the net cost of final industrial products.

Raw materials processed under contracts are raw materials owned by a customer and passed for processing to other organisations to manufacture products under contracts concluded.

The volume of industrial production by economic activity "Manufacture of food, beverages and tobacco products" is given for large, medium, small and micro-organisations of all forms of ownership, regardless of their main economic activity; from 2013 - taking into account the volume of industrial production of individual entrepreneurs and households.

The number of organisations is provided by legal entities, including small and micro-organisations, and by separate units of legal entities with separate balance, whose main economic activity is "Manufacture of food, beverages and tobacco products" and who carried out this type of economic activity in the relevant year.

Production index for economic activity "Manufacture of food, beverages and tobacco products" is a relative measure reflecting changes in the output in periods under comparison.

The index of industrial production is calculated based on the dynamics of production of representative goods/ services and builds on individual production indices of specific products, with further step-by-step aggregation of individual indices in indices of production by economic activity and for the industry as a whole. At the first stage of index computation, the volumes of production of representative goods/ services for the base year are used as weights for aggregation. At following stages, the structure of gross value added by economic activity for the base year is used as weights for aggregation. The base year is equal $t-2$, where t is a reference year. The base year is changed annually.

Industrial production in physical terms is generally measured by gross output, i.e. including products consumed for own industrial needs within the enterprise. The volume of production includes products manufactured both from own raw materials and from those supplied by customers.

Data on production in volume terms are given in accordance with the classification groupings of the National Classification of Economic Activities of the Republic of Belarus (OKRB 007-2012).

Percentage of production capacity use is a relative indicator characterizing the degree of production capacity use for the manufacture of certain types of products. It is calculated as the ratio of actual output to the average annual capacity effective in the reporting period for the manufacture of this product.

9.1. Main indicators of organisations with economic activity in “Manufacture of food, beverages and tobacco products”

11. FOOD BALANCE SHEETS

The section presents food balance sheets of selected agricultural products and per capita consumption of basic foodstuffs.

Food balance sheets is a system of statistical indicators which reflect the sources of basic agricultural products, raw supplies and food, and their utilisation. The balance sheets show the flows of products from their production to their final use and allow for the routine analysis of the correlation between the resources and their use as well as for the forecasting of trends on the food market.

The level of self-sufficiency in basic agricultural products reflects the extent to which domestic production is able to meet all the demands of the country and is measured as the percentage ratio of domestic production to domestic consumption. Domestic consumption includes personal consumption of population, industrial use and processing for non-food purposes, and losses.

11.1. Level of self-sufficiency in basic agricultural products

(percent)

	2010	2011	2012	2013	2014	2015	2016	2017
