

# ENVIRONMENTAL QUALITY OF LIFE

Indicators characterise environmental conditions affecting quality of life of the population through air and water pollution, climate change

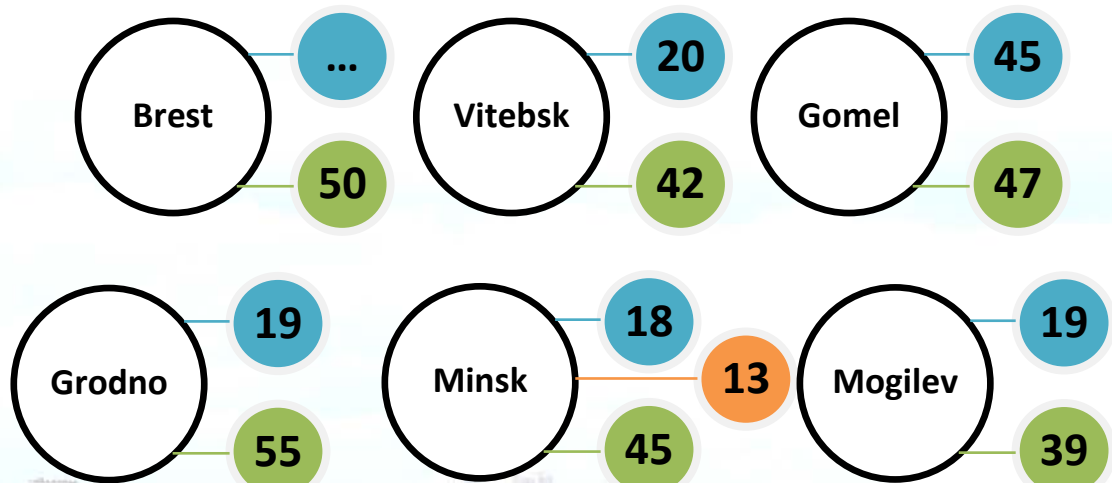

## Average annual concentrations of selected pollutants in the atmosphere of selected cities

microgrammes per cubic metre of air

Average annual concentrations of:

- fine particulate matter (class PM 10)
- fine particulate matter (class PM 2,5)
- ground-level ozone

Average annual maximum permissible concentration:

## Wastewater discharge into surface water bodies

1 035 mln m<sup>3</sup>

## Access to water supply and sewerage facilities

Share of households living in apartments / houses equipped with:

piped water                      hot water supply                      sewerage
