FOREWORD

The data book presents the key demographic characteristics of families and households, and statistics on demographic processes which influence family formation, and on state of health of women and children.

The book provides the main socioeconomic indicators reflecting various aspects of life quality of households and their members, such as employment and incomes, expenditures and consumption, education, culture, engagement in physical training and sports, housing conditions, consumer market of goods and services, transport and communications, tourism and leisure.

Presented are data characterizing the subjective opinion of household members about the household material conditions, housing conditions, quality of selected services as well as the indicators of subjective attitudes towards various life aspects.

The book was prepared using the data obtained by the bodies of state statistics through state statistical surveys, population censuses, and sample household surveys.

Data for the main indicators are broken down by regions and Minsk city. Some international comparisons are also provided.

Selected statistical indicators are furnished with brief methodological notes provided at the beginning of each section.

In certain cases data for 2012 are provisional and may be revised in further issues.

Explanation of symbols:

- not applicable
- data not available
- 0,0 negligible magnitude

In several cases insignificant discrepancies between the total and the sum can be assigned to data rounding.

Relative measures are calculated on the basis of absolute figures with smaller units of measurement than the data presented in the tables.

Responsible for the sections:

2.5. Dynamics of marriages and divorces (graph)	49
2.6. Average age at re-marriage (graph).....	49
2.7. Marriages and divorces by regions and Minsk city	50
2.8. Marriages by age of bride	51
2.9. Marriages by age of groom	52
2.10. Marriages by age of bride and groom in 2012	53
2.11. Share of newly married by age group and previous marital status in 2012	54
2.12. Share of first married and re-married in 2012 (graph)	56
2.13. Newly married by previous marital status, by regions and Minsk city.....	57
2.14. Dissolved marriages by number of common children, by regions and Minsk city	58
2.15. International migration of population age 16 and over by marital status	60
2.16. Births, deaths and natural increase.....	61
2.17. Crude rates of birth, death and natural increase by regions and Minsk city	62
2.18. Crude birth rate in 2012 (cartogram)	63

2.19. Age-specific birth rates and total fertility rate	64
2.20. Age-specific birth rates by regions and Minsk city	65
2.21. Live births by marital status of mother (graph).....	67
2.22. Life births to unmarried women.....	67
2.23. Live births by age and marital status of mother, by regions and Minsk city	68
2.24. Live births by age of mother and birth order	70
2.25. Distribution of live births by birth order (graph)	71
2.26. Mean age of mother at childbirth.....	72
2.27. Mean age of mother at childbirth (graph).....	72
2.28. Reproductive attitudes of women ages 15-49.....	73
2.29. Life expectancy at birth (graph).....	74
2.30. Life expectancy at birth by regions and Minsk city.....	74

3. Health and medical care

3.1. Treatment and prevention organizations and medical personnel	79
3.2. Disease incidence by main disease groups	81
3.3. Incidence of active tuberculosis among population	82
3.4. Incidence of human immunodeficiency virus (HIV) among population	82
3.5. Incidence of malignant neoplasms among population	83
3.6. Incidence of venerologic diseases by sex and age.....	84
3.7. Incidence of alcohol and substance dependence among population	85
3.8. Share of smoker population ages 16 and over	86
3.9. Share of smoker population ages 16 and over by regions and Minsk city.....	86
3.10. Distribution of smoker men and women ages 16 and over by frequency of smoking (graph)	87
3.11. Distribution of men and women ages 16 and over by number of cigarettes smoked daily (graph).....	87
3.12. Distribution of households with children by number of smoking members	88
3.13. Share of population ages 16 and over suffering from overweight	88
3.14. Share of population ages 16 and over suffering from overweight by regions and Minsk city	89
3.15. Use of female contraception.....	89
3.16. Deliveries and terminations of pregnancy (abortions).....	90
3.17. Abortions by age group of women.....	90
3.18. Diseases preceding or occurred during pregnancy	91
3.19. Diseases complicating deliveries and postpartum period	91
3.20. Health status of inpatient newborns	92
3.21. Disease incidence in infants in the first year of life by disease group.....	92
3.22. Infant mortality	94
3.23. Breast feeding of infants in the first year of life	94
3.24. Distribution of children under 2 years of age by feeding model depending on age (graph) .	95
3.25. Immunisation of children under 1 year of age	95
3.26. Immunisation coverage in 2012	96
3.27. Preventive examinations of children and their results.....	96
3.28. Disease incidence in children by disease group	97
3.29. Child mortality by sex	98
3.30. Injury and poisoning in children.....	99

4. Employment and income

4.1. Population of major age groups by regions and Minsk city.....	102
4.2. Share of working-age population in total population as of January 1, 2013 (cartogram)	103
4.3. Economically active population by regions and Minsk city	104
4.4. Distribution of employed and unemployed population by marital status and sex in 2012	104
4.5. Registered unemployment rate by regions and Minsk city	105
4.6. Unemployed registered with labour, employment and social protection agencies by regions and Minsk city	105
4.7. Job placement by labour, employment and social protection agencies.....	106
4.8. Per capita money incomes	107
4.9. Structure of money incomes by regions and Minsk city	107
4.10. Nominal and real gross average monthly wages and salaries by regions and Minsk city....	109
4.11. Nominal gross average monthly wages and salaries in 2012 (cartogram).....	110
4.12. Dynamics of real incomes (graph)	111
4.13. Real disposable money incomes	111
4.14. Composition of household disposable resources	112
4.15. Disposable resources of households with different composition	113
4.16. Structure of disposable resources of households with different composition in 2012	113
4.17. Disposable resources of households by regions and Minsk city	114
4.18. Structure of disposable resources of households by regions and Minsk city	114
4.19. Distribution of households with different composition by average per capita disposable resources in 2012.....	116
4.20. Distribution of households by average per capita disposable resources by regions and Minsk city in 2012	117
4.21. Minimum subsistence budget.....	118
4.22. Ratio of per capita money incomes to minimum subsistence budget in 2012 (graph)	119
4.23. Ratio of average per capita disposable resources to minimum subsistence budget in households with different composition	119
4.24. Share of households that expressed dissatisfaction with their money income.....	120

5. Expenditures and consumption

5.1. Composition of money expenditure of households	124
5.2. Composition of money expenditure in households with different composition	125
5.3. Money expenditures of households by regions and Minsk city.....	126
5.4. Structure of money expenditure of households by regions and Minsk city.....	127
5.5. Structure of household consumption expenditure.....	128
5.6. Structure of consumption expenditure in households with different composition	129
5.7. Structure of household consumption expenditure by regions and Minsk city	131
5.8. Household consumption expenditure	132
5.9. Household consumption expenditure by regions and Minsk city in 2012	135
5.10. Distribution of households by share of food expenditure in total consumption expenditure.	136
5.11. Distribution of households with children by share of food expenditure in total consumption expenditure	137
5.12. Household food expenditure in 2012	138
5.13. Household food consumption.....	139
5.14. Food consumption in households of different composition	140
5.15. Household food consumption by regions and Minsk city	142

5.16. Level of food consumption in households with children under age 18 (graph).....	144
5.17. Caloric value and nutritional content of food consumed by households.....	145
5.18. Caloric value and nutritional content of food consumed by households of different composition	146
5.19. Caloric value and nutritional content of food consumed by households by regions and Minsk city	148
5.20. Main indicators of retail turnover of trade through all sales channels and paid services for population	150
5.21. Retail turnover of trade through all sales channels and paid services per capita by regions and Minsk city	151
5.22. Structure of paid services for population by type	151
5.23. Total volume of paid services for population per capita	152
5.24. Structure of personal services for population by type	152
5.25. Total volume of personal services for population per capita.....	153
5.26. Availability of durable goods in households	154
5.27. Availability of durable goods in households of different composition in 2012.....	154
5.28. Availability of durable goods in households by regions and Minsk city	155
5.29. Share of households owning durable goods by regions and Minsk city in 2012	156
5.30. Availability of passenger cars by regions and Minsk city	156

6. Housing conditions

6.1. Grouping of urban areas by population size as of January 1, 2013	158
6.2. Distribution of urban areas by population size as of January 1, 2013 (graph)	158
6.3. Housing stock.....	159
6.4. Availability of housing by regions and Minsk city	159
6.5. Availability of housing as of the end of 2012 (cartogram)	160
6.6. Total floor space of housing per person in households of different composition.....	161
6.7. Distribution of households by total floor space of occupied dwellings in 2013	162
6.8. Distribution of households by number of rooms and total floor space	163
6.9. Distribution of housing stock by ownership type, by regions and Minsk city in 2012	163
6.10. Distribution of private households by type of occupied dwellings.....	164
6.11. Characteristics of occupied apartments by number of rooms.....	165
6.12. Occupied apartments by regions and Minsk city as of the end of 2012	165
6.13. Private households by number of occupied living rooms.....	166
6.14. Improvement of housing conditions	167
6.15. Housing conditions improvement by regions and Minsk city in 2012	167
6.16. Commissioning of individual dwelling houses by regions and Minsk city	168
6.17. Improvement of housing stock	168
6.18. Distribution of households by facilities available in occupied dwellings in 2013.....	169
6.19. Availability of home fixed telephone lines connected to public telecommunication network (graph)	170
6.20. Availability of home fixed telephone lines connected to public telecommunication network by regions and Minsk city	170
6.21. Retail trade and catering facilities by regions and Minsk city.....	171
6.22. Pharmacies by regions and Minsk city.....	171
6.23. Distribution of households by time spent to reach the closest social infrastructure facilities in 2013	172
6.24. Street lighting in urban areas by regions and Minsk city.....	174

6.25. Density of public hard-surface motor roads by regions.....	174
6.26. Sanitary control of ambient air by regions and Minsk city.....	175
6.27. Sanitary control of domestic and drinking water supply by regions and Minsk city	176
7. Education, upbringing of children, leisure	
7.1. Preschool education.....	180
7.2. Enrolment in preschool education programmes by type of institution	181
7.3. Distribution of children enrolled in preschool education programmes by age	181
7.4. Gross enrolment ratio in preschool education by regions and Minsk city.....	182
7.5. Support in education to children aged 3-4 from adult household members	182
7.6. Share of children aged 3-4 with whom parents engage in development activities (graph) ..	183
7.7. Share of children aged 3-4 who develop in conformity with their age (graph).....	183
7.8. General secondary education	184
7.9. Day-time institutions of general secondary education	185
7.10. Shifts in day-time institutions of general secondary education	186
7.11. Day-time institutions of general education with extended daytime groups and pupils enrolled	186
7.12. Private day-time institutions of general secondary education	187
7.13. Special education institutions implementing special education programmes at the level of general secondary education	188
7.14. Institutions of general secondary education by regions and Minsk city	189
7.15. Enrolment in general secondary education programmes by regions and Minsk city.....	189
7.16. Supplementary education for children and young people.....	190
7.17. Disciplining of children in families.....	191
7.18. Vocational-technical education.....	192
7.19. Qualified graduates from full-time vocational-technical education programmes and job placement	192
7.20. Institutions of vocational-technical education by regions and Minsk city	193
7.21. Secondary specialized education.....	193
7.22. Structure of enrolment in secondary specialized education programmes by source of payment (graph)	194
7.23. Institutions of secondary specialized education by regions and Minsk city	195
7.24. Assignment to jobs of specialist graduates from full-time secondary specialized education programmes funded from the republican and/or local budgets.....	195
7.25. Higher education	196
7.26. Students enrolled in higher education programmes on a self-paying basis	197
7.27. Institutions of higher education by regions and Minsk city	197
7.28. Job assignment of specialist graduates from full-time higher education programmes funded from the republican budget	198
7.29. Postgraduate and doctoral education	198
7.30. Enrolment in postgraduate (adjunct) programmes by regions and Minsk city	199
7.31. Children's recreation institutions	199
7.32. Sanatorium, resort and recreation organizations	200
7.33. Main indicators of public libraries	201
7.34. Composition of public library stock.....	201
7.35. Public library stock and number of readers per 1 000 population by regions and Minsk city	202

7.36. Main indicators of professional theatres.....	202
7.37. Main indicators of stationary circuses	203

1. DEMOGRAPHIC CHARACTERISTICS OF HOUSEHOLDS

The section presents data on the number and distribution of households and families by types characterising their composition.

A **private household** is a group of persons who combine to occupy the same apartment, one-dwelling house, garden house (dacha), hall of residence, or other housing unit, and also non-residential units used for habitation, to provide themselves with all essentials for living, and to keep the house, fully or partially pooling and spending their incomes. Persons living in a private household may have kin or marital relations, or may be non-relatives. Private household may consist of one person who lives alone and provides him/herself with all essential for living.

An **institutional household** is a group of persons who share the same accommodation unit and meals, but do not have individual budgets or common consumption expenditure, who are subject to common rules, and are generally not related to each other.

The following types of private households can be distinguished depending on their composition:

a **nuclear household**, which is a household consisting of one couple with or without children, or a lone parent with children;

an **extended household**, which is a household consisting of one nuclear household with related persons, two or more related to each other nuclear households with or without related persons, and also related persons not constituting a nuclear household;

a **composite household**, which is a household with non-relatives.

In defining types of private households, **children** include natural children, step children, and also adopted children regardless of the age, who live with their parents (parent) in the same household, are not married, and do not have their own children. Foster children are not included.

A **family** consists of two or more persons with kin or marital relations, who live together and share a common budget. Unlike a household, family does not include non-relatives and may not consist of one person who lives alone and provides him/herself with all essentials for living.

Average household (family) size is defined as a quotient from dividing of the number of people living in households (families) by the number of households (families).

2. MARRIAGES AND BIRTHS

The section contains data on marital status of women and men, deaths, births, including by birth order and age of mother.

Data on births, deaths and marriages are compiled on the basis of statistical data from registration records of births, deaths and marriages made by civil registration offices. The number of births includes live births only. Data on divorces are calculated on the basis of record cards of divorcees filled in by judicial authorities, and also from divorce records filled in by vital registration offices.

Natural increase is defined as the difference between the annual numbers of live births and deaths.

Crude birth/death rates are calculated as the ratio of the number of live births/deaths during a calendar year to the average annual population. **Natural increase rate** is calculated as the difference between crude birth and crude death rates.

Total fertility rate shows the average number of children that would be born to a woman over her reproductive life (ages 15-49) if she were to experience the current age-specific fertility rates through her lifetime.

Crude marriage and divorce rates are calculated as the ratio of the annual number of marriages and divorces to the average annual population.

Life expectancy at birth is the average number of years to be lived by an individual from a cohort, if he or she were subject to age-specific mortality rates of a given period throughout his or her life. Life expectancy is the most adequate generalising measure of existing mortality levels in all ages.

Data on reproductive attitudes of women are based on the results of the Multiple Indicator Cluster Survey of the situation of children and women in Belarus (MICS4)¹⁾.

¹⁾ For the information about MICS4, please see section 10.

3. HEALTH AND MEDICAL CARE

The section contains statistical data on disease prevalence and incidence by main disease groups, number of people with disabilities, and public attitudes toward smoking. Presented are data on the network of medical organizations and their personnel, and other information.

Incidence includes newly recorded in the current year cases of disease. It is calculated as the ratio of the newly diagnosed cases of a disease to the average annual population. The result is then multiplied by 100 000.

Prevalence (patient population) includes total patients with a particular disease who applied to outpatient and polyclinic institutions both in the current and in previous years and are recorded as of the end of the reference year. It characterizes the degree of occurrence of a condition. It is calculated as the ratio of the total patients with a particular disease, i.e. recorded as of the end of the reference year out of total applications to a doctor in the current and in previous years to the population as of the end of the current year. The result is then multiplied by 100 000.

In order to prevent and reduce morbidity, prophylactic vaccinations are carried out in children. The timeliness and completeness of **immunization coverage** is measured by the ratio of children immunized against diphtheria, measles, whooping cough, mumps, poliomyelitis to the number of children who reached the age of one year in the reference year. The result is then multiplied by 100.

The occurrence of intestinal infection in children to a large degree depends on the sanitary condition of children's institutions. The most common diseases in childhood are influenza and acute upper respiratory infections.

Outpatient obstetric and gynecological care to women is provided mostly by women's health clinics. The pregnancy and delivery outcome for mother and fetus depends on the prevention, early recognition and treatment of the number of pregnancy diseases and complications. Pregnant women under surveillance of women's health clinics generally complete their pregnancy with timely or preterm delivery, and only in few cases they have spontaneous abortion or need a therapeutic abortion.

Infant mortality is the number of infant deaths under 1 year of age.

Infant mortality rate is calculated as the sum of two components, where the first one is the ratio of the number of deaths under one year of age out of births in the year for which the rate is computed to the total births in the same year, and the second one is the ratio of the number of deaths under one year out of births in the preceding year to the total births in the preceding year. It is computed per mille (per 1 000 live births).

Child mortality rate reflects the level of mortality among children aged 0 to 4 years.

Maternal mortality rate is the number of women's deaths from pregnancy, childbirth and postnatal complications (during 42 days after the childbirth) per 100 000 live births.

Disabled is a person who, due to the functioning limitations resulting from physical or mental deficiency, needs social assistance and protection. Functioning limitations include full or partial loss of capacity or ability of self-care, movement, orientation, communication, control of behaviour and labour.

Newly recognized disabled comprise persons with disability stated for the first time in the reference year (first disability).

General disability characterizes disabled populations registered with social protection authorities regardless of the time they were recognized as disabled.

Hospital organizations are health organizations providing inpatient medical care. These include civilian and military hospitals, national scientific and practical centres, maternity hospitals, dispensaries, and medical units with inpatient departments, and also other health organizations having hospital beds.

In hospital organizations recorded are beds equipped with required appliances and ready for patient admission, regardless of whether they are occupied or not, as of the 31st of December of the reference year. The number of beds does not include beds for mothers in children's departments and beds for the newborn in maternity departments.

Outpatient and polyclinic organizations are health organizations of any ownership providing outpatient medical care and/or medical expertise (polyclinics, ambulatory clinics, dispensaries, medical units, etc.).

The number of specialty physicians from 2005 to 2009 covers the persons with higher medical education employed as of the end of the year in organizations providing outpatient, inpatient and emergency medical care; in sanitary organizations, social security institutions, scientific and practical centres, institutions for training, re-training and advanced professional training of medical and pharmaceutical personnel, in central offices of health authorities, etc.

From 2010 it comprises persons with higher medical education for whom such education is a mandatory prerequisite for performing their occupational functions, i.e. employed as of the end of the year in specialty positions in institutions providing outpatient, inpatient and emergency medical care, sanitary organisations, social security institutions, sanitary hygiene institutions, and medical diagnostic services.

Obstetrician-gynecologists are persons with higher medical education in "Obstetrics and gynecology", pediatricians are persons with higher medical education in "Pediatrics".

The number of paramedical personnel from 2005 to 2009 covers the persons with secondary specialized medical education employed as of the end of the year in institutions providing outpatient, inpatient and emergency medical care, sanitary organisations, social security institutions, scientific and practical centres, pre-school institutions, schools, infant homes, etc. From 2010 it comprises persons with secondary specialized medical education employed as of the end of the year in the positions of specialists with secondary specialized medical education in organizations providing outpatient, inpatient and emergency medical care, in sanitary hygiene institutions and medical diagnostic centres, pre-school institutions, schools, infant homes, etc.

4. EMPLOYMENT AND INCOME

The section presents data on the number and composition of economically active population, on the employed in the economy, on unemployed registered with labour, employment and social protection agencies, on job placements. There is information on the amount and structure of money incomes of the population and household disposable resources.

Economically active population (labour force) is a part of the population that furnishes the supply of labour for the production of goods and services. It comprises the employed population and unemployed registered with labour, employment and social protection agencies.

Population employed in the economy (employed population) refers to the persons who are in paid employment for wage or salary or self-employment for profit, including persons temporarily absent from work. Unpaid family workers are also included.

Data on the number of economically active population and population employed in the economy are annual averages.

The **unemployed** comprise persons aged 15-74 who during the reference period met the following criteria:

- were not in paid employment (or self-employment);
- were seeking work;
- were available for work.

Unemployed registered with labour, employment and social protection agencies comprise persons of working age who permanently reside in the Republic of Belarus, are without work or earnings, are registered with labour, employment and social protection agencies at the place of permanent residence for the purpose of finding appropriate work, are seeking work, and are available for work.

Registered unemployment rate is defined as the ratio of the number of unemployed registered with labour, employment and social protection agencies to the economically active population (employed and unemployed registered with labour, employment and social protection agencies).

Duration of continued unemployment (duration of work search) is the period of time during which an unemployed person is seeking work. For the unemployed registered as of the end of the reference period the duration of continued unemployment is measured from the date of their registration until the end of the reference period.

Money incomes include compensation of labour, incomes from business and other income generating activities, transfers to population (pensions, benefits, scholarships and other transfers), property incomes (interest on deposits, dividends and other property incomes), and other incomes (earnings from sales of agricultural products and other receipts).

Disposable money incomes are incomes after taxes, fees and charges.

Real disposable money income is a ratio calculated by dividing the nominal growth rates of disposable money incomes by the consumer price index of goods and services for a corresponding time period.

Per capita money income is calculated by dividing the total money incomes by the average annual population.

Nominal gross average monthly wages and salaries are calculated by dividing the accrued wage fund, including income tax and compulsory insurance contribution of employees, by the average payroll number of employees, and by the number of months in the period.

Real wages and salaries characterise the purchasing power of wages and salaries in the reference period taking into account price changes of consumer goods and services compared with the base period. For this, real wage index is calculated by dividing the index of the nominal gross wages and salaries by the consumer price index for the same time period.

Disposable resources are money funds of households, the value of consumed foodstuffs produced in personal subsidiary plots less the associated expenses, and the value of in-kind benefits and payments.

The consumed food produced in personal subsidiary plots is valued at average prices of foodstuffs purchased by households.

The value of in-kind benefits and payment is the valuation in money terms of different in-kind benefits and payments received by households (both from the budget and from organizations) for the purchase of goods and services as full or partial payment of their actual cost. Benefits and payments are valued as reported by the interviewed household members.

Minimum subsistence budget is the value of the minimum set of material goods and services required to support vital activity and preserve health of a person, and also compulsory payments and contributions.

The minimum subsistence budget is approved by the Government of the Republic of Belarus on a quarterly basis in prices of the last month of a quarter.

The minimum subsistence budget is the criterion to recognize the population (households) as low-income.

5. EXPENDITURES AND CONSUMPTION

The section presents data based on the results of the sample household living standards survey. There is information on the amounts and structure of expenditures, consumption of basic foodstuffs, their nutrition and caloric value, availability of durable goods. Presented are indicators characterizing the consumer market of goods and services, i.e. the dynamics and structure of retail turnover and paid services for the population.

Sample household living standards survey is a method of state statistical observation of the changes in the level, quality and conditions of living of the population.

The National Statistical Committee of the Republic of Belarus annually conducts household sample survey using the methodology which complies with international standards. The survey is carried out in all regions of the Republic of Belarus and Minsk city and is based on the principles of voluntary participation of households.

The sampling is done on the basis of the territorial principle. At the first stage, cities, urban-type settlements and rural localities are selected within all administrative units; households are then selected in them proportionally to their number in the general population.

The general population comprises total households residing in the Republic of Belarus (based on the most recent population census data), excluding institutional households (living in residential care facilities for the elderly, boarding schools, etc.) as well as students living in halls of residence.

Survey results are extrapolated to the general population by means of statistical weighting, that is by assigning to each surveyed household a statistical weight which characterizes the represented number of households.

A **household** is a person or a group of persons who share the budget and a housing unit and may not be necessarily relatives.

Money expenditure is the sum of actual costs incurred by household members during a survey period. Money expenditures include purchase of goods and services, taxes, insurance contributions and other payments (interest on credits, etc.).

Consumption expenditures are money expenses of households on food (including eating out), purchase of alcoholic beverages, non-food goods and services. Consumption expenditures do not include taxes and insurance contributions as well as all expenses associated with the production of agricultural products in personal subsidiary plots and saving (bank deposits, purchase of real estate, foreign currency, etc.).

Level of per capita food consumption is calculated by dividing total food consumed in households (excluding food away from home) by the number of actually present household members. The total food consumed comprises purchased food and food received by a household without payment (from a personal subsidiary plot, as a gift, etc.), spent on personal consumption.

The consumption of main foodstuffs includes:

- bread and bakery products, flour, cereals and pasta in flour equivalent;
- milk and dairy products (butter, cheese, cream, sour cream, curd, ice cream, preserved milk, powdered milk, etc.) in milk equivalent;
- meats of various animals, meat by-products, meat products in meat equivalent;
- fish and fish products (dried fish, canned fish, caviar, prepared fish products and sea foods) in fish equivalent;
- eggs from poultry, egg powder, mélange in egg equivalent;
- potatoes, vegetables and food gourds, fruits and berries, fresh, dried, salted, preserved, pickled, etc. in fresh equivalent.

Nutritional and caloric food value is shown for the foodstuffs consumed directly in households (excluding food away from home).

Retail turnover of trade through all sales channels is the sum of retail turnover of trade and retail turnover at markets and in shopping centres.

Retail turnover of trade is the value of goods sold to the population by trade organizations through retail (trade) network, or by organizations with other activity, with payment in cash at their cash desk, for personal consumption or household use.

Retail turnover at markets and in shopping centres is the value of consumer goods sold to the population at markets and in shopping centres for personal consumption or household use.

Retail turnover of catering is the value of products produced in-house by catering trade facilities and purchased goods sold to the population for cash or paid for by plastic bank cards through catering trade facilities for consumption, primarily on the spot, and also to legal entities and individual entrepreneurs, fro cash and cashless, to arrange catering for various population groups.

Volume indices of retail trade turnover is a relative measure of dynamics expressed as a percentage and characterizing changes in turnover over time provided the prices in the reference period did not change compared with the base period.

Paid services for population include personal, transport and communications services, housing and utilities, cultural, tourism and excursion services, services of hotels and similar accommodation facilities, physical training and sports, medical, sanatorium and health improvement, education and other services.

Volume of paid services for population reflects the consumption of different services and is measured by the amount of money paid by an individual for the services provided, or by a legal entity or its separate subdivision (out of gain) of which he/she is an employee.

The indicator is compiled on the basis of state statistical reporting data on paid services for population and sample household living standards survey results.

Volume index of paid services for population is a relative measure describing changes in the volume of paid services for population in the current period compared with the base period at constant prices.

5.1. Composition of money expenditure of households

(data of the sample household living standards survey;

5.16. Level of food consumption in households with children under age 18

(data of the sample household living standards survey;
annually per household member; kilograms)

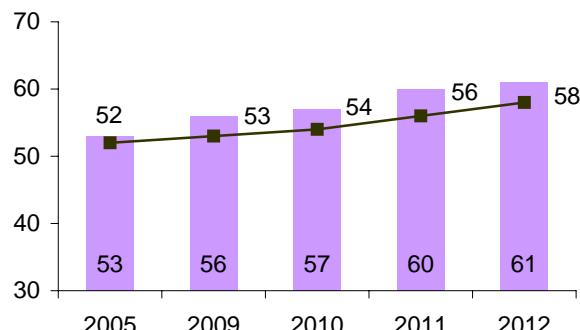

Bread and bakery products

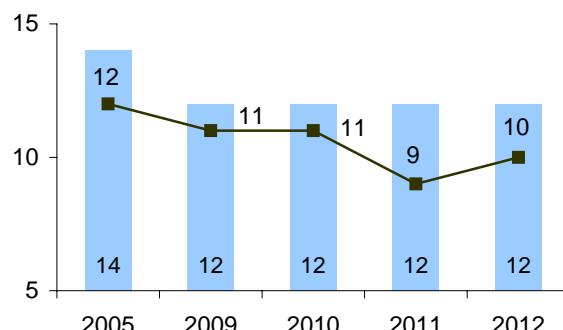

Milk and dairy products

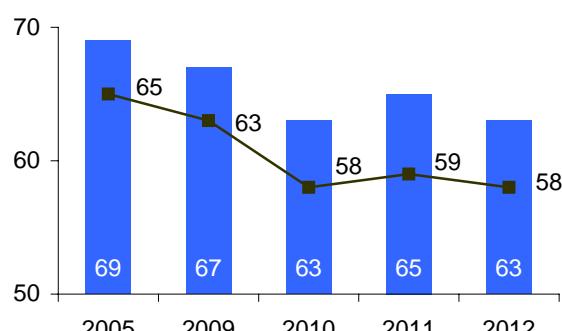

Meat and meat products

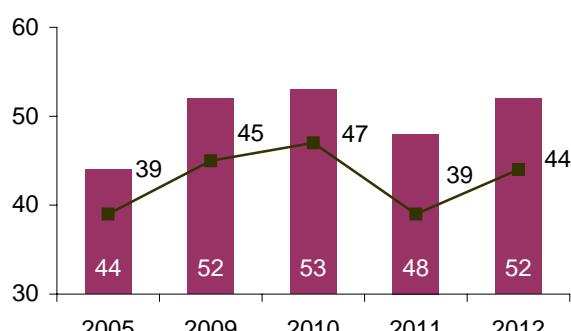

Fish and fish products

Vegetables and cucurbits

Fruits and berries

Average per capita food consumption
Median level of food consumption¹⁾

¹⁾ Median level of food consumption is the level of consumption in the middle of a ranking of the average per capita food consumption arranged in an ascending order.

5.17. Caloric value and nutritional content of food consumed by households

(data of the sample household living standards survey;
daily average per household member)

6. HOUSING CONDITIONS

The section contains data on housing stock, its improvement and availability of housing.

Housing stock comprises total living quarters of the Republic of Belarus regardless of the type of ownership, with a fixed location, including residential buildings of general type, special residential buildings (hostels, public houses for temporary habitation, residential care facilities for the elderly, persons with disabilities, veterans, and other), service and other living quarters. Housing stock does not include premises designed for seasonal habitation (garden houses (dachas); houses, apartments, rooms for recreation in health and recreation centres, recreation homes, camping sites and similar premises); premises designed for temporary accommodation (hotel rooms, premises for travelers); premises designed for habitation, but not completed; mobile housing units (caravans, trailers, tents and other mobile housing units); self-built or occupied structures not designed for habitation regardless of their occupancy; living quarters in reformatories and prisons, barracks, and similar buildings.

Total floor space of dwelling (apartment or one-dwelling house) is defined as the sum of floor areas of living and auxiliary rooms (kitchens, halls, indoor corridors and stairs, bathrooms or shower rooms, sanitary facilities, storerooms, furnace rooms and other non-living premises) located on above-ground, attic, basement and underground levels, in heated additional structures and verandahs, excluding the floor space of non-heated (cold) rooms, loggias, balconies and porches.

Total floor space of premises in hostels is defined as the sum of floor areas of living rooms, auxiliary rooms, utility and public rooms. Floor corridors, lobbies, staircases, portals and technical rooms are not included.

The total floor space of dwellings does not include roof space, technical cellars (technical garrets), outdoor communications, as well as portals, stairways and stair landings, lift and other shafts, doorsteps, outdoor open stairs, balconies, loggias, porches, attics and mezzanines (non-heated); detached summer kitchens, wash houses, barns, arbours; and also areas occupied by housing maintenance organizations, shops, polyclinics, pharmacies, saving banks, post offices, children's institutions, personal services organizations, etc.

Availability of housing per inhabitant is calculated by dividing the total floor space of housing stock as of the end of the year by the number of population as of the same date.

Apartment is an isolated dwelling consisting of one or several habitable and auxiliary rooms which has direct access from communal premises or directly from the surrounding grounds.

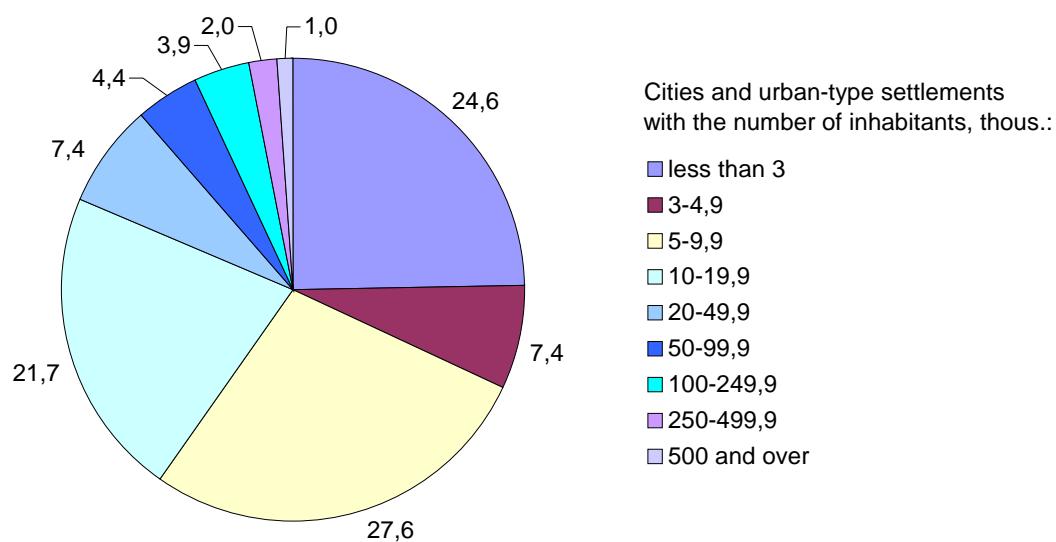

Improvement of housing stock is equipping of dwellings with specific amenities: piped water, sewerage, central heating, piped gas, hot water, bathrooms, etc.

Density of public motor roads is the length of public motor roads in kilometers per area unit (normally 1 000 square kilometers) of a country or region.

7. EDUCATION, UPBRINGING OF CHILDREN, LEISURE

The section presents the key indicators of the preschool, general secondary, vocational-technical, secondary specialized, higher and postgraduate education programmes. There is also the information characterizing cultural development in the Republic of Belarus. There are data on public libraries, club institutions, professional theatres, and other cultural institutions. Provided are data on publishing books, magazines, and newspapers.

Institutions of preschool education comprise nurseries, kindergarten-nurseries, kindergartens, sanatorium-type nurseries-kindergartens, sanatorium-type kindergartens, preschool centres for child development, and other educational institutions implementing preschool education programmes, special education programmes at the level of preschool education and special education programmes at the level of preschool education for mentally insufficient children, other organizations authorized in accordance with the legislation to implement preschool education programmes.

Early childhood development index is the share of children who develop accordingly to their age at least in three out of four development dimensions (cognitive development, socioeconomic development, physical development, and reading and writing skills).

Institutions of general secondary education comprise primary schools, basic schools, secondary schools, evening schools, gymnasias, boarding gymnasias, lyceums, specialised lyceums, Suvorov military schools, cadet schools, boarding schools for orphaned children and children deprived of parental care, sanatorium-type boarding schools, teaching and education complexes, and other educational institutions implementing general secondary education programmes, special education programmes at the level of general secondary education, and special education programmes at the level of general secondary education for mentally insufficient persons.

Institutions of vocational-technical education comprise vocational-technical schools, vocational lyceums, vocational-technical colleges, and other educational institutions implementing vocational-technical education programmes.

Institutions of secondary specialized education comprise colleges, and other educational institutions implementing secondary specialized education programmes (vocational-technical colleges, gymnasias-colleges of arts, basic schools-colleges of arts, secondary schools-colleges of arts, secondary schools- schools of Olympic reserve, higher education institutions).

Institutions of higher education can be of the following types: classic university, specialized university (academy, conservatory); institute; higher college.

Postgraduate education includes two levels:

postgraduate (adjunct) programme is the 1st level of postgraduate education designed for the preparation of specialists with planning and research skills, possessing deep theoretical knowledge leading to a qualifying research paper (dissertation) to be awarded the

title of the candidate of science. At the 1st level of postgraduate education the postgraduate (adjunct) education programme is implemented which leads to the scientific qualification of "Researcher", regardless of full-time, blended, or application-type mode of study;

doctoral programme is the 2nd level of postgraduate education designed for the preparation of specialists with skills in new or existing relevant research, or research analyses leading to a qualifying research paper (dissertation) to be awarded the academic title of doctor of science. The 2nd level of postgraduate education covers the full-time or application-type doctoral programme.

The state statistical survey covers public (publicly available) libraries.

Public libraries comprise libraries allowing the individuals to use their stocks regardless of their age, sex, nationality, language, residence, position, finance, religious affiliation, political convictions, etc.

Club institutions comprise clubs, palaces (houses, centres) of culture, centres (houses) of folk arts (folklore), centres (houses) of crafts, youth cultural centres, centres of national cultures, and other club institutions implementing educational and entertaining functions providing favourable conditions to individuals to engage in folk and creative arts to meet their cognitive, self-educational, spiritual and physical development, as well as interpersonal and recreational needs.

Professional theaters comprise opera and ballet, drama, musical, children's and youth theatres. Data on theatres do not include folk and amateur theatres.

Indicators characterizing the production of **printed matter** include registered issues (publication) of books, brochures, magazines, newspapers and other periodicals, their single and annual circulation.

Sanatorium and health resort organizations are organizations providing sanatorium and health resort services located in resort or treatment and health improvement areas. These include sanatoria, students' prophylactic sanatoria, children's rehabilitation and health improvement centres.

Sanatorium and resort services are services of sanatorium and resort care, boarding, lodging, leisure, etc. provided by sanatorium and health resort organizations.

Health improvement organizations are organizations for adults, children, adults and children where the population can improve health. These include health and recreation resorts, health improvement centres (complexes), recreation houses (camps), boarding houses and other organizations one of the activity of which is health improvement of the population.

Health improvement is a set of measures designed to enhance the resistance to physical, biological, psychological and social factors of the environment in order to improve health of people.

beginning of 2013; percent of total)

8. SOCIAL SUPPORT AND SOCIAL SERVICES

The section presents information on the key indicators of social security and social assistance provided to the population. There are data on minimum social guarantees and social benefits, pensions, social protection of selected population groups, and on children and adolescents deprived of parental care and their placement, on residential care facilities for the elderly and persons with disabilities (adults and children).

Minimum social guarantees are minimum money benefits which are guaranteed by the state in cases foreseen by the effective legislation. These include minimum compensation of labour, pensions, scholarships and benefits.

State targeted social assistance is provided to the selected groups of the population (families) in order to maintain their incomes at the minimum guaranteed level and to assist them in solving their difficult life problems.

State targeted social assistance is provided in the following ways:

monthly and/ or lump-sum social allowances for the purchase of food, medicaments, clothing, footwear, school supplies, and for other needs to ensure the normal vital activity, and also for the (full or partial) payment for housing and utilities;

social allowances for the reimbursement of expenses on diapers;

social allowances to pay for the technical means of social rehabilitation;

provision of children of the first two years of life with foodstuffs.

The value of in-kind benefits and payments is the valuation in money terms of various benefits and payments received by household members (both from the budget and from organizations) for the purchase of goods and services in the form of full or partial payment of their actual cost.

Number of pensioners is the number of persons which receive state pensions granted in accordance with the legislation of the Republic of Belarus.

Average pension amount is estimated by dividing the total amount of pensions granted by the number of pensioners.

Real pension amount characterizes the purchasing power of pensions granted in the reference period due to the price changes of consumer goods and services compared with the base period. For this, real pension index is calculated by dividing the average pension index by the consumer price index for the same time period.

8.1. Total amount of social payments¹⁾

9. LOW-INCOME HOUSEHOLDS

The section contains the indicators characterizing the standard of living of low-income households.

Low-income households are households with the level of per capita disposable resources below the minimum subsistence budget.

Disposable resources are household funds, the value of consumed food produced in personal subsidiary plots less the material expenses of its production, and the value of in-kind benefits and payments received.

The consumed food produced in personal subsidiary plots is valued at average food purchase prices.

The value of in-kind benefits and payments is the estimation in money terms of various in-kind benefits and payments received by household members (both from the budget and from organizations) for the purchase of goods and services in the form of full or partial payment of their actual cost. The benefits and payments are valued as reported by the interviewed household members.

Minimum subsistence budget is the value of the minimum basket of goods and services required to secure the vital activity and preserve health of an individual, and also compulsory payments and contributions.

The minimum subsistence budget is calculated as per capita average and for the main sociodemographic groups, and is approved by the Government of the Republic of Belarus on a quarterly basis at prices of the last month of a quarter.

The subsistence level budget is used in the Republic of Belarus to measure the level and scale of low-income prevalence.

9.1. Share of low-income households

(data of sample household living standards survey;
percent of total households of corresponding type)

	2005	2006	2007	2008	2009	2010	2011	2012
All households	9,3	8,4	5,6	4,2	3,7	3,4	5,8	4,6
of which by residence:

¹⁾ Excluding housing rented from individuals.

10. SUBJECTIVE ATTITUDES TOWARDS VARIOUS LIFE ASPECTS

The section contains data about subjective attitudes of household members towards various life aspects. Presented are indicators of the satisfaction with life, material and housing conditions, health.

The section is prepared on the basis of the data of the sample household living standards survey and Multiple Indicator Cluster Survey of the situation of children and women in Belarus (MICS4).

Sample household living standards survey is a method of state statistical observation of the changes in the level, quality and conditions of living of the population.

The Multiple Indicator Cluster Survey of the situation of children and women in Belarus (MICS4) was conducted in 2012 by the National Statistical Committee of the Republic of Belarus within the framework of the international programme of household surveys developed by the United Nations Children's Fund (UNICEF).

The survey was conducted using sampling method in all regions of the country and Minsk city and built upon the principles of voluntary participation of households.

The purpose of conducting MICS4 in the Republic of Belarus was to obtain statistics in such areas as maternal and child health, child development and education, the indicators characterizing attitudes of women and men toward domestic violence, sexual behaviour of young people, satisfaction of young people with life in general and with its individual aspects.

General life satisfaction is defined in MICS4 as the full or partial satisfaction of respondents with such aspects of their life as family life; friendly relations; study (for those in education) or work (for those in work); health; appearance (how a person looks); place of residence (equipment with facilities and quality of housing); and attitude of people around.

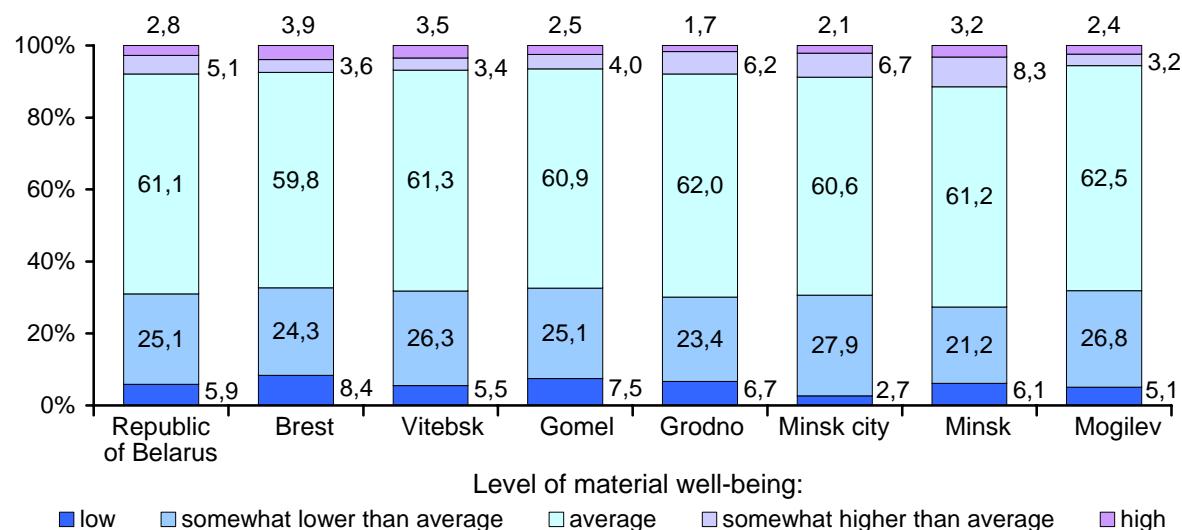

10.1. Subjective opinion of households about their material conditions in 2012

(data of sample household living standards survey; percent of total)

	Total	Of which rated the level of their material well-being as				
		low	somewhat lower than average	average	somewhat higher than average	high
All households	100	5,9	25,1	61,1	5,1	2,8
of which by residence:						
urban	100	5,3	25,7	60,8	5,4	2,8

11. INTERNATIONAL COMPARISONS

The section presents selected indicators reflecting the demographic situation, labour market conditions, structure of household consumption expenditures in selected countries, availability of housing and commissioning of residential buildings, as well as the main indicators of the healthcare, education and culture systems.

The materials were prepared on the basis of statistical publications of international organizations (United Nations, Statistical Office of the European Union (Eurostat), Interstate Statistical Committee of the Commonwealth of Independent States (CISSTAT), and national statistical offices.
