I.A.Kostevich, I.S.Kanhro, E.I.Kukharevich, E.M.Palkovskaya, O.N.Klavsut,
R.L.Vrublevsky

The data book presents statistics on the administrative and territorial division of the Republic of Belarus, on the size and age-sex composition of the population, its distribution over the area of the country, on births, deaths, marriages and divorces as well as migration. Data on births are provided by age and marital status of mother, and by birth order; data on deaths are shown by sex, age and cause of death. The book contains summary demographic indicators characterizing the reproduction processes in population, and data on life expectancy at birth.

The data book is designed for senior management, government agencies, researchers, teaching staff, faculty members and students of universities, and other interested users.

PREFACE

The Yearbook contains statistical information on key demographic indicators of the Republic of Belarus. Demographic development of Belarus is described by statistics on population, vital statistics and migration data. The statistical data at the national and regional levels are presented in historical time series; main demographic indicators at the district level are provided for a number of years.

Population numbers for the intercensal period (2000 to 2009) have been adjusted for the 2009 population census results; these adjusted population values have been used for the computation of ratios.

The data book provides a brief description of data sources, the way the data have been obtained, and the computation rules employed. Ratios are calculated on the basis of absolute values. In certain cases minor discrepancies between the total and the sum are due to data rounding.

- 0,0 negligible magnitude

CONTENTS

Methodological notes.....	Pg. 8
1. Administrative and territorial division, population size and composition	
1.1 The main demographic indicators.....	15
1.2 Administrative and territorial division of the Republic of Belarus as of 1st January, 2014.....	16
1.3. Population of the Republic of Belarus.....	17
1.4. Population of the country by regions and Minsk City.....	19
1.5. Grouping of towns and urban-type settlements by population size as of 1st January, 2014.....	26
1.6. Towns with population of 50 000 or more.....	27
1.7. Average annual population by sex by regions and Minsk City.....	28
1.8. Population by sex.....	32
1.9. Population by sex, by regions and Minsk City.....	35
1.10. Population by sex and age, by regions and Minsk City.....	45
1.11. Number of female per 1 000 male of corresponding age group.....	67
1.12. Population by main age groups.....	68
1.13. Age dependency ratios.....	71
1.14. Population as of 1st January, 2014 and average annual population in 2013 by regions, Minsk City, towns of regional subordination, and districts of the Republic of Belarus.....	72
1.15. Population as of 1st January, 2014 by regions, Minsk City, towns of regional subordination, and districts of the Republic of Belarus, by main age groups.....	78
1.16. Population by sex as of 1st January, 2014 by regions, Minsk City, towns of regional subordination, and districts of the Republic of Belarus.....	90
1.17. Population projections as of the beginning of year.....	102
1.18. Population projections as of the beginning of year by regions and Minsk City.....	104
1.19. Grouping of towns and urban-type settlements by population size as of 1st January, 2014 (chart).....	117
1.20. Population pyramid (chart).....	118
1.21. Urban population pyramid (chart).....	119
1.22. Rural population pyramid (chart).....	120
1.23. Share of main age groups in total population (chart).....	121
2. General indicators of population reproduction	
2.1. Births, deaths and natural increase.....	122
2.2. Births, deaths and natural increase by regions and Minsk City.....	125

	Pg.
2.3. Crude rates of births, deaths and natural increase by regions and Minsk City.....	132
2.4. Births, deaths and natural increase by sex.....	140
2.5. Crude rates of births, deaths and natural increase by sex.....	143
2.6. Births, deaths and natural increase by regions, districts, towns, and urban-type settlements of the Republic of Belarus in 2013.....	145
2.7. Life expectancy at birth.....	157
2.8. Life expectancy at birth by regions and Minsk City.....	158
2.9. Age-specific life expectancy in 2013.....	161
2.10. Birth and death rates (chart).....	162
2.11. Life expectancy at birth (chart).....	162
2.12. Crude rates of birth and death by regions and Minsk City in 2013.....	163
3. Marriages and divorces	
3.1. Marriages, divorces and crude marriage and divorce rates for the Republic of Belarus.....	164
3.2. Marriages, divorces and crude marriage and divorce rates by regions and Minsk City.....	166
3.3. Marriages by age of groom and bride.....	170
3.4. Marriages among young people 14 to 30 years of age by regions and Minsk City.....	174
3.5. Marriages by age of groom and bride in 2013.....	176
3.6. New marriage partners by previous marital status.....	177
3.7. New marriage partners by age group and previous marital status in 2013.....	179
3.8. New marriage partners by age group and previous marital status by regions and Minsk City in 2013.....	181
3.9. Marriages among young people 14 to 30 years of age by previous marital status in 2013.....	190
3.10. Marriages among young people 14 to 30 years of age by previous marital status by regions and Minsk City in 2013.....	191
3.11. Marriages by educational attainment of groom and bride in 2013.....	192
3.12. Marriages by nationality of groom and bride.....	193
3.13. Average age at marriage.....	195
3.14. Divorces by age of former spouses by regions and Minsk City.....	196
3.15. Divorces by duration of dissolved marriage by regions and Minsk City.....	204
3.16. Dissolved marriages by number of common children by regions and Minsk City.....	208
3.17. Marriages and divorces (chart).....	212
3.18. Average age at first marriage (chart).....	212
3.19. Divorces by duration of dissolved marriage (chart).....	213
3.20. Dissolved marriages and number of children left without a parent (chart).....	213

4. Natality	
4.1. Live births by birth order.....	214
4.2. Live births by age of mother and birth order.....	216
4.3. Live births by age of mother and birth order by regions and Minsk City in 2013.....	227
4.4. Live births to mothers 14 to 30 years of age by birth order.....	235
4.5. Live births to mothers 14 to 30 years of age by births order, by regions and Minsk City in 2013.....	236
4.6. Live births to female out of registered marriage by regions and Minsk City.....	237
4.7. Live births to female out of registered marriage by age of mother.....	241
4.8. Live births to female out of registered marriage by age of mother and birth order in 2013.....	243
4.9. Single and multiple births.....	244
4.10. Average age of mother at childbirth.....	245
4.11. Age-specific birth rates and total fertility rate for the Republic of Belarus.....	246
4.12. Age-specific birth rates by regions and Minsk City.....	249
4.13. Live births by birth order (chart).....	256
4.14. Female 14 to 30 years of age and number of children born to them (chart).....	257
4.15. Average age of mother at childbirth (chart).....	257
4.16. Live births to mothers 14 to 30 years of age by birth order (chart).....	258
4.17. Live births to all female and to female out of registered marriage (chart).....	258
4.18. Live births to female out of registered marriage by age of mother (chart).....	259
4.19. Live births to female out of registered marriage by age of mother in 2013 (chart).....	259
5. Mortality	
5.1. Deaths by sex and age group.....	260
5.2. Age-specific death rates.....	265
5.3. Deaths at ages 14 to 30 years by sex and age group.....	270
5.4. Death rates at ages 14 to 30 years.....	272
5.5. Deaths by sex and age group, by regions and Minsk City in 2013.....	274
5.6. Age-specific death rates by regions and Minsk City in 2013.....	278
5.7. Deaths at ages 14 to 30 years by regions and Minsk City.....	282
5.8. Death rates at ages 14 to 30 years by regions and Minsk City.....	283
5.9. Maternal mortality.....	284
5.10. Infant mortality by regions and Minsk City.....	285

	Pg.
5.11. Child mortality by sex.....	293
5.12. Perinatal mortality by regions and Minsk City.....	295
5.13. Maternal mortality (chart).....	299
5.14. Infant mortality (chart).....	300
5.15. Infant mortality rate (chart).....	300
5.16. Child mortality (chart).....	301
5.17. Death rates at ages 14 to 30 years (chart).....	301

6. Cause-specific mortality

6.1. Deaths by main groups of causes.....	302
6.2. Cause-specific death rates.....	305
6.3. Cause-specific deaths by sex.....	308
6.4. Cause-specific death rates by sex.....	310
6.5. Mortality from homicides and suicides by regions and Minsk City.....	312
6.6. Cause-specific deaths by regions and Minsk City.....	318
6.7. Cause-specific death rates by regions and Minsk City.....	328
6.8. Cause-specific deaths at working age by regions and Minsk City.....	337
6.9. Cause-specific death rates at working age by regions and Minsk City.....	346
6.10. Infant deaths by main groups of causes.....	355
6.11. Cause-specific infant mortality rates.....	355
6.12. Cause-specific infant mortality rates by regions and Minsk City.....	356
6.13. Deaths by main groups of causes (chart).....	365
6.14. Cause-specific mortality at working age(chart).....	366
6.15. Deaths from diseases of the circulatory system by sex and age group in 2013 (chart)	366
6.16. External causes of death (chart).....	367

7. Migration

7.1. Total migration results.....	368
7.2. Total migration results by regions and Minsk City.....	369
7.3. Interregional migration of the Republic of Belarus in 2013.....	370
7.4. International migration by countries.....	373
7.5. International migration by nationality and sex in 2013.....	376
7.6. International migration by sex and age.....	377
7.7. International migrants 16 years old and over by educational attainment.....	380

	Pg.
7.8. International migrants 16 years old and over by countries and educational attainment in 2013.....	381
7.9. International migrants 16 years old and over by marital status.....	384
7.10. Ethnic composition of international migrants.....	385
7.11. International migration (chart).....	386
7.12. Structure of international migration by CIS countries in 2013(chart).....	387
7.13. Structure of international migration by non-CIS countries in 2013 (chart).....	388

8. International comparisons

8.1. Land area and population of selected countries in 2012.....	389
8.2. Average annual population.....	391
8.3. Crude birth rates.....	393
8.4. Crude death rates.....	395
8.5. Infant mortality rates.....	397
8.6. Life expectancy at birth.....	399
8.7. Crude rates of birth and death by CIS countries in 2012 (chart).....	401
8.8. Infant mortality rates by CIS countries in 2012 (chart).....	401
8.9. Life expectancy at birth in selected countries (chart).....	402

Cartographic material

Population as of 1st January, 2014.....	403
Population density as of 1st January, 2014.....	404
Young age dependency ratio as of 1st January, 2014.....	405
Old age dependency ratio as of 1st January, 2014.....	406
Share of population under working age in total population as of 1st January, 2014.....	407
Share of working-age population in total population as of 1st January, 2014.....	408
Share of over working population in total population as of 1st January, 2014.....	409
Crude birth rate in 2013.....	410
Crude death rate in 2013.....	411

METHODOLOGICAL NOTES

1. ADMINISTRATIVE AND TERRITORIAL DIVISION, POPULATION SIZE AND COMPOSITION

The information on the administrative and territorial division is based on data of the Scientific and Production State Republic Unitary Enterprise “National Cadastre Agency”. The size of the land area is provided according to data of the State Property Committee of the Republic of Belarus.

Population density reflects the level and degree of inhabitation of individual territories and its concentration at a definite time. It is calculated as a ratio of total population in a given territory to its land area and is expressed as a number of people per square kilometre.

Data on the number and composition of the population for the census years are presented in the following way: 1897 as of 9 February; 1926 as of 17 December; 1939 and 1979 as of 17 January; 1959 and 1970 as of 15 January; 1989 as of 12 January; and 1999 as of 16 February. For other years current population estimates as of 1 January are shown. Data on the number and composition of the population from the 1897, 1926, 1939 and 1959 censuses show present population; data from the 1970 and further censuses refer to resident population.

Population numbers for the intercentral years (2000-2009) have been adjusted for the 2009 census results; ratios have been calculated using these adjusted figures.

Present population covers persons present in a given territory on the census date including those temporarily present. Resident population is referred to persons permanently residing in a given territory as well as foreign citizens and stateless persons who have lived in a given territory for more than one year.

Current estimates of resident population for intercensal years are computed using the most recent census data, plus annual numbers of births and arrivals in a given territory, minus deaths and departures from a given territory. Current population estimates for the previous years are adjusted for the final results of the following year's census.

The population is distributed into urban and rural depending on the place of residence. For this purpose, the localities attributed by the legislation to the urban category (towns; urban, industrial and resort settlements) are considered to be urban settlements. All other localities are classified as rural.

Natural population increase is the difference between the numbers of births and deaths for a specified period. It can have a positive value when the number of births exceeds the number of deaths, or a negative value (natural decrease), if the number of deaths higher than that of births.

Net migration is the difference between the numbers of arrivals and departures within a specified time period. It can be positive when the number of arrivals is higher than the number of departures, or negative, if the number of departures exceeds that of arrivals.

Total population increase is the sum of natural increase and net migration. The total increase of urban and rural population is the sum of natural increase, net migration, and the number of population that became urban /rural as a result of changes in the category of localities (transformation of rural localities into urban or urban into rural in accordance with the legal acts of the Republic of Belarus).

Men ages 16 to 59 years and women ages 16 to 54 years are referred to working age population.

Demographic burden is a generalized quantitative characteristic of the population age structure showing non-working age burden on the society. The following measures of demographic burden are computed: ratios of under working age, over working age, or non-working age populations to working age population (men ages 16 to 59 years, women ages 16 to 54 years), which are child dependency ratio, aged dependency ratio, and dependency ratio respectively.

2. GENERAL INDICATORS OF POPULATION REPRODUCTION

Data on births and deaths are based on the statistics contained in the birth and death records filled out by civil registration offices. The number of births includes live births only.

Crude vital statistics rates are used mainly to estimate the changes in the population size as affected by fertility and mortality. Crude birth and death rates are computed as the ratios of the number of live births or deaths respectively within a calendar year to the average annual population. Natural increase rate is the difference between crude birth and death rates. Average annual population is calculated as an arithmetic mean of the populations as of the beginning and as of the end of a calendar year.

Along with crude rates, a set of specific vital statistics rates is computed. To do this, the number of events is correlated with the population, to which these events refer (e.g. age-specific birth / death rates, total fertility rate, etc.).

Life expectancy at birth is a mean number of years to be lived by an individual from a hypothetical cohort, assuming the mortality level for every age remains the same as for the given period of time. Life expectancy is the most adequate generalizing characteristic of mortality level for all ages in a given period.

Age-specific life expectancy is a mean number of years to be lived by survivors to a given age, assuming the mortality level for every next age remains unchanged.

The life expectancy measure is derived from computed life tables representing an ordered sequence of values showing a cohort gradually decreasing in the course of transition from younger to older ages as affected by the existing mortality level. On the basis of age-specific death rates several indices are computed for each age diversely reflecting the pattern of extinction of the initial human cohort.

3. MARRIAGES AND DIVORCES

The data on marriages are compiled on the basis of annual data contained in the copies of marriage records filled out by civil registration offices. Data on divorces are obtained from record cards containing information on persons dissolving marriage filled out by the judicial authorities.

Crude marriage / divorce rates are computed as the ratios of the number of marriages or divorces respectively within a calendar year to the average annual population. Marriage rates show the intensity of entering into marriage in total population or in individual population groups.

In accordance with the currently effective Marriage and Family Code of the Republic of Belarus, the marriageable age is fixed to be 18 years old. In exceptional cases a civil registration office may reduce the marriageable age of marrying persons, but not more than by three years.

Marriage date is the date of marriage registration by civil registration offices.

Marriage is considered to be dissolved from the day the judicial decision on marriage dissolution enters into legal force. The age of divorced is computed as the difference between the date of divorce registration and date of birth. Duration of dissolved marriage is the difference between the date of divorce and the date of marriage.

4. NATALITY

Live birth is the complete expulsion or extraction from its mother of a product of conception irrespective of the duration of pregnancy, which after such separation, breathes or shows any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of muscles, whether or not the umbilical cord has been cut or the placenta has separated. Each product of such a birth is considered live-born.

Stillbirth is the death of a product of conception before its complete expulsion or extraction from its mother irrespective of the duration of pregnancy. After such separation, the fetus does not breathe or show any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of muscles.

Since 2005 in the number of live births and stillbirths included all infants born weighing 500 grams and more.

Age-specific birth rates are calculated as the ratio of annual number of live birth to women of a given age group to the average annual number of women at this age.

$$f_x = \frac{B_x}{\overline{W}_x} \times 1000,$$

where f_x is age-specific birth rate;

B_x is the number of births to women age x ; and

\overline{W}_x is the average annual number of women age x .

To compute the rate for the age group under 20, the number of women ages 15 to 19 is taken as denominator. To compute the rate for the age group 15 to 49, all births, including the births to mothers under 15 and births to mothers 50 and over, are included into the numerator.

Total fertility rate shows the average number of children that would be born to a woman throughout her reproductive years (from 15 through 50 years of age) if the age-specific fertility rates for the specified year remained unchanged. Its value does not depend on the population age composition and characterises the average level of fertility in a given calendar period. TFR with the value higher than 4.0 is considered to be high, while the value less than 2.15 is considered to be low.

5. MORTALITY

Age-specific death rates are deaths at specified ages or in a specified age group over a definite period of time.

Infant mortality is the number of deaths of infants under 1 year of age.

Infant mortality rates are computed as the sum of the two components, the first one of which is the ratio of the number of deaths under one year of age out of total births in a specified year to the total number of births in the same year; and the second one is the ratio of the number of deaths under one year out of births in the previous year to the total number of births in the previous year. It is calculated per mille (per 1000 live births).

Perinatal period begins from the 22nd completed week (154th day) of gestation (at this time the fetus body weight is normally 500 grammes) and ends upon 7 full days after birth.

Perinatal mortality refers to the deaths of viable fetuses beginning from the 22nd week of gestation up to the start of labour, deaths in the course of deliveries, and also deaths of the newborns during the first 168 hours (7 full days) of life.

Perinatal mortality rate is computed as the ratio of the sum of stillbirths and deaths during the first week of life to the number of life and stillbirths in a specified year.

Child mortality is a number of deaths of children 0 to 4 years of age.

Maternal mortality is defined as pregnancy-related (regardless of its duration and location) death of a woman occurring during pregnancy or within 42 days upon its completion from any cause related to pregnancy, complicated by pregnancy or its management, but not from an accident or an incidentally occurring cause.

6. MORTALITY BY CAUSES OF DEATH

The source of information on causes of death are inscriptions in medical death certificates made by physicians on diseases, accidents, homicides, suicides or other external causes resulting in death. Such inscriptions make the basis for specifying the cause of death in death records maintained by civil registration offices. The copies of such death records are provided to state statistical bodies for the compilation of mortality data by cause of death.

Cause-specific death rates are computed as ratios of the number of deaths from specified causes to the average annual population. Unlike crude death rates, they are computed not per 1000, but per 100 000 population.

Age-specific death rates are computed as ratios of the number of deaths from specified causes at specified ages to the average annual population at these ages.

Working-age death rates by main groups of causes are calculated for one year by dividing the number of deaths from specified causes at working ages by the average annual population at the same ages.

Infant mortality rates by main groups of causes are computed for the groups of causes of death (infectious and parasitic diseases, diseases of the respiratory organs, diseases of the digestive organs, congenital malformations, conditions originating in the perinatal period, and other causes) by multiplying the number of deaths from a specified cause in total deaths under 1 year of age by infant mortality rate. The rate is calculated per 10 000 births.

Beginning from 2002, mortality data by cause of death are compiled according to the Abbreviated List of Death Causes based on the International Statistical Classification of Diseases and Related Health Problems (WHO, 10th Revision, 1989).

7. MIGRATION

Migration is a physical movement of humans from one area to another related to the changing of the place of residence.

Statistics on migration in the Republic of Belarus are compiled based on the migration record cards to the address arrival and departure sheets coming from the citizenship and migration units of the internal affairs bodies. These cards are drawn up in case of change of the place of residence within the country, immigration or emigration. Included are also arrivals from other localities for full-time studies in educational institutions and scientific organisations for the period of more than one year registered at the place of stay for the duration of study. In cases when foreign citizens and stateless persons are granted second permit for temporary residence, i.e. when they have lived in the country for more than one year the migration record card is filled out as well.

Arrivals in and departures from summer houses (dachas) for summer season; for recreation and treatment in resort areas, sanatoria, rest homes and the like; for treatment in hospitals and other treatment and prevention institutions; for leave or vacation; on a visit are not subject to statistical recording. Movements from one rural locality to another within the same administrative district or relocations within the same settlement are not recorded.

The concepts of "arrivals" and "departures" characterize migration with some conditionality, as one and the same person may change the place of residence more than once within a year.

8. INTERNATIONAL COMPARISONS

The section contains selected indicators characterising the population of the Republic of Belarus, life expectancy, birth and death rates, including infant mortality rate in comparison with similar indicators for some foreign countries (including CIS countries).

Data are prepared on the basis of statistical publications of World Bank data, CIS Statistical Committee and national statistical agencies.

1. ADMINISTRATIVE AND TERRITORIAL DIVISION, POPULATION SIZE AND COMPOSITION

1.1. Main demographic indicators

	2005	2010	2011	2012	2013
Population (at year-end), thous. of which by age:	9 630	9 481	9 465	9 464	9 468

Mogilev	29.1	37	21	15	2	4	8	173	3 015

The Republic of Belarus is situated in the centre of Europe on the watershed of the Baltic Sea and the Black Sea. It occupies nearly 2% of Europe's land area.

¹⁾ Data of Scientific and production state republican unitary enterprise "National Cadastre Agency" of the State Property Committee of the Republic of Belarus

1.3. Population

¹⁾ According to the Research Economics Institute of the Ministry of Economy of the Republic of Belarus²⁾ According to current statistics.

**1.19. Группировка городов и поселков городского типа
по численности населения на 1 января 2014 года**

(процентов)

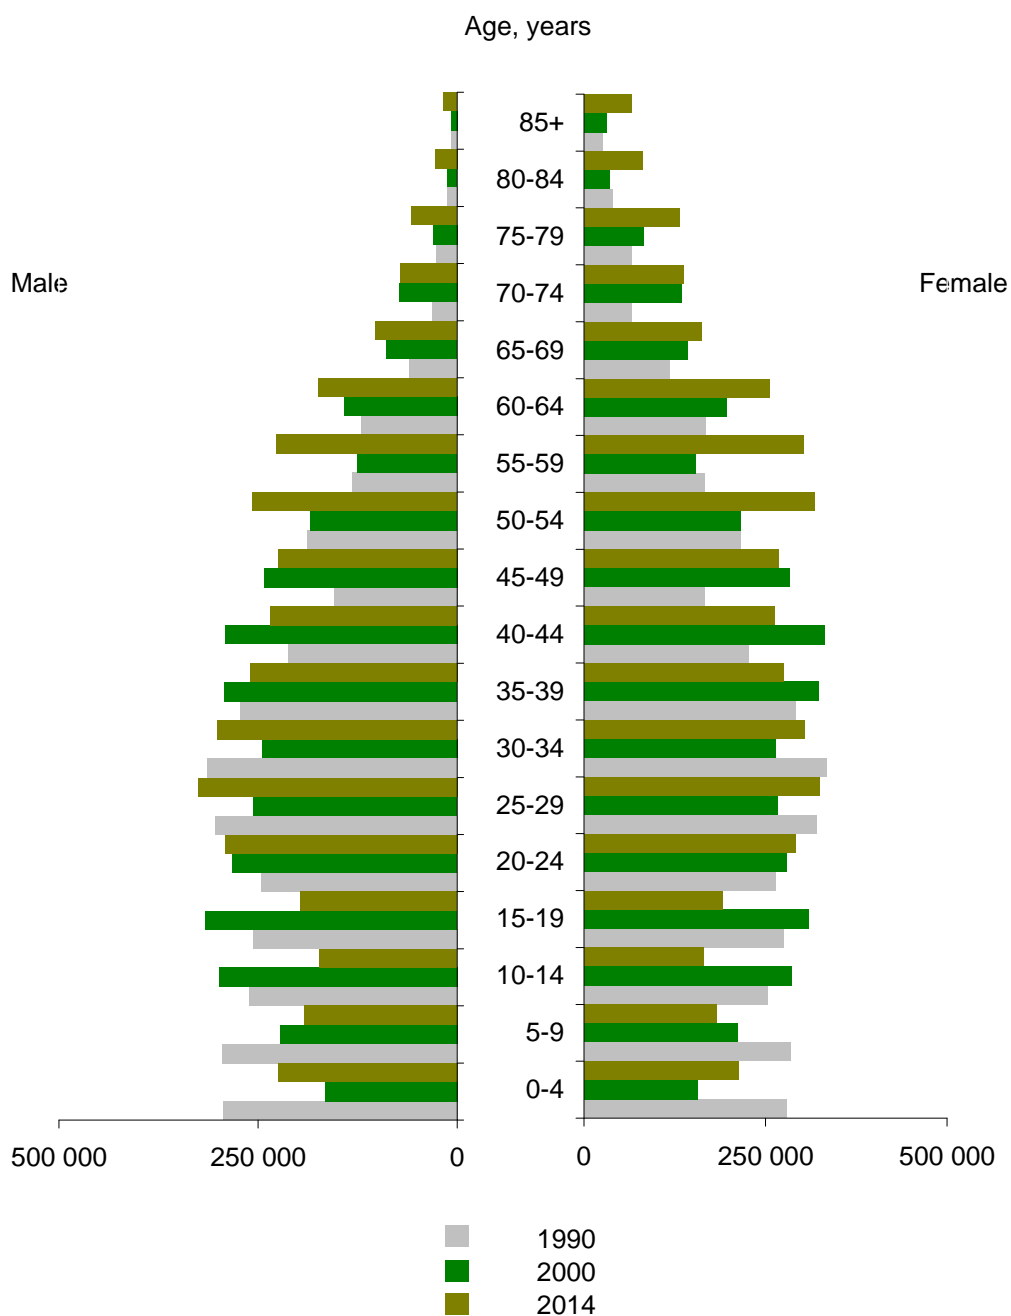

1.20. Population pyramid

(beginning of 1990, 2000 and 2014; persons)

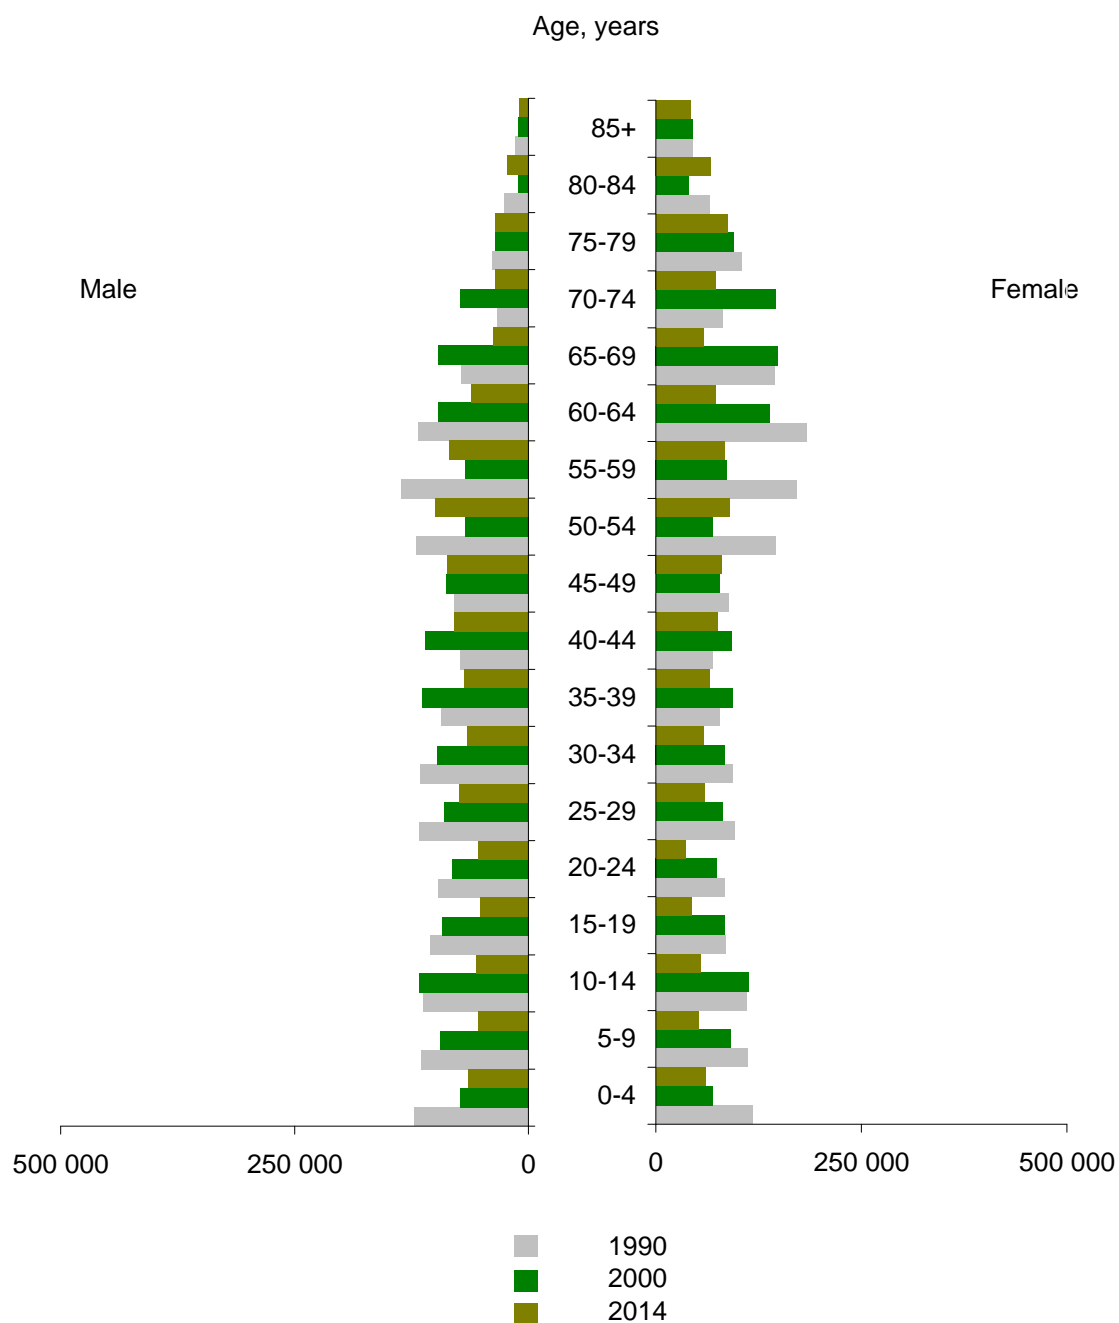

1.21. Urban population pyramid (beginning of 1990, 2000 and 2014; persons)

1.22. Rural population pyramid

(beginning of 1990, 2000 and 2014; persons)

1.23. Share of main age groups in total population

(beginning of year; percent)

2. GENERAL INDICATORS OF POPULATION REPRODUCTION

2.1. Births, deaths and natural increase

Year	Total, persons				Per 1000 population			Deaths under 1 year of age per 1 000 births
	births	deaths	of which deaths under 1 year of age	natural increase, decrease (-)	births	deaths	natural increase, decrease (-)	
Total population
