

NATIONAL STATISTICAL COMMITTEE OF THE REPUBLIC OF BELARUS

TRANSPORT AND COMMUNICATIONS IN THE REPUBLIC OF BELARUS

Statistical book

MINSK

2014

EDITORIAL BOARD:

V.I. Zinovsky – Chair

Irina Kostevich, Vadim Bogush, Irina Kangro, Elena Kukharevich, Elena Palkovskaya,
Olga Klavsut, Sofia Ermolovich

The statistical book presents the official statistical information on railway, motor road, water, air, urban electric transport, on financial situation in transport, transport accident.

The publication is intended for senior management, public administration bodies, financial and economic departments of organisations; research community, teaching staff, post-graduates and students of economics of higher education establishments, and other interested users.

ISBN 978-985-7015-64-1

INTRODUCTION

The statistical book presents information on the dynamics of the state of transport and communications of the Republic of Belarus.

Statistical data on main indicators are provided in a breakdown by regions and Minsk City, thus, allowing for comparing and getting an insight into development of country's regions.

Information on main socio-economic indicators of transport and communications, investment, manufacture, exports and imports of transport vehicles and means of communications, finances and tariffs is included.

Data on freight and passenger transportation by each mode of transport, financial results of transport activities and length of motor roads as well as data on transport accident are provided.

Data on international comparisons of the Republic of Belarus with the CIS countries and foreign countries are given in a separate chapter.

Statistical indicators are provided with brief methodological explanations; charts and diagrams are also presented.

Data on selected indicators were revised as compared with previously published data. Data for 2013 are subject to further revision.

The statistical book is prepared by the Division of Transport and Information and Communications Technology Statistics with the involvement of other subdivisions of the National Statistical Committee of the Republic of Belarus and is intended for a wide range of users.

Explanation of symbols:

- not applicable
- ... data not available
- 0,0 negligible magnitude

Relative ratios are calculated on the basis of absolute figures expressed in smaller units than those given in tables.

The discrepancy between the totals and the sum in some cases can be explained by data rounding.

Abbreviations

thous.	–	thousand
mln	–	million
bn	–	billion
km	–	kilometre
tonne-km	–	tonne-kilometre
t	–	tonne
passenger-km	–	passenger-kilometre
km/h	–	kilometres per hour

Persons responsible for the chapters of the statistical book:

4.42. Financial results of freight transportation by specialized organisations and of passenger transportation by general purpose motor road transport.....	55
4.43. Share of expenditures on maintenance and operation of buses reimbursed by passenger fare (graphic)	55
4.44. Availability of personal passenger cars by regions and Minsk City.....	56
4.45. Availability of personal passenger cars per 1 000 population (graphic)	56
4.46. Operation of motor road transport by regions, towns and districts in 2013.....	57
Motor roads	
4.47. Length of motor roads.....	63
4.48. Length of general use motor roads by regions.....	63
4.49. Length of general use motor roads by surface type.....	64

	Pg.
4.50. Length of hard surface general use motor roads by surface type, by regions as of January 1, 2014.....	64
4.51. Density of hard surface general use motor roads by regions.....	65
4.52. Structure of general use motor roads by surface type, by regions.....	65
4.53. Commissioning of motor roads by regions.....	66
4.54. Number of roadside facilities located on general use motor roads.....	66
4.55. Total length of streets, passages, quays in towns and urban-type settlements by regions and Minsk City.....	66
Urban electric transport	
4.56. Length of operating tracks of urban electric transport (in two-way terms).....	67
4.57. Rolling stock of urban electric transport	68
4.58. Passenger transportation by urban electric transport.....	68
4.59. Passenger transportation indices by urban electric transport.....	69
4.60. Passenger turnover of urban electric transport.....	70
4.61. Passenger turnover indices of urban electric transport.....	71
4.62. Passenger transportation and passenger turnover indices of urban electric transport	71
4.63. Financial results of passenger transportation by urban electric transport.....	72
4.64. Share of expenditures on maintenance and operation of urban electric transport reimbursed by passenger fare	72
Inland water transport	
4.65. Freight transportation and freight turnover of general purpose inland water transport	73
4.66. Freight transportation and freight turnover indices of general purpose inland water transport.....	73
4.67. Passenger transportation and passenger turnover of general purpose inland water transport.....	73
4.68. Passenger transportation and passenger turnover indices of general purpose inland water transport...	74
4.69. Financial results of freight and passenger transportation by general purpose inland water transport	74
Air transport	
4.70. Freight transportation and freight turnover of air transport	75
4.71. Freight transportation and freight turnover indices of air transport	75
4.72. Passenger transportation and passenger turnover of air transport.....	75
4.73. Passenger transportation and passenger turnover indices of air transport	76
4.74. Financial results of passenger, freight and postal item transportation by air transport.....	76
Logistics services	
4.75. Main indicators of logistics centers activities	77
4.76. Payroll number and nominal gross average monthly wages and salaries of employees of logistics centers	77
4.77. Logistics services in 2013	78
4.78. Shipping and forwarding services in 2013.....	78
4.79. Structural elements of logistics centers.....	79

	Pg.
Transport accident rate	
4.80. Main indicators of road traffic.....	80
4.81. Road traffic accidents per 100 000 population by regions and Minsk City.....	80
4.82. Road traffic accidents per 100 000 registered vehicles by regions and Minsk City in 2013 (graphic)	81
4.83. Road traffic accidents and victims thereof due to driving under the influence of alcohol by regions and Minsk City in 2013.....	81
5. Communications	
5.1. Communications organisations by major economic activity.....	82
5.2. Revenue from communication services	82
5.3. Share of revenue from selected communication services in total revenues from communication services (graphic).....	83
5.4. Volume indices of communication services provided to legal persons, individual entrepreneurs and natural persons	83
5.5. Share of revenue from communication services provided to natural persons in total revenues from general use communication services.....	84
5.6. Share of revenue from selected kinds of communication services in total revenues from communication services provided to natural persons(graphic).....	84
5.7. Revenues from communication services by regions and Minsk City.....	85
5.8. Main indicators of general use communications.....	85
5.9. Fixed telephone lines connected to general use telecommunication network by regions and Minsk City.....	86
5.10. Home fixed telephone lines connected to general use telecommunication network by regions and Minsk City.....	87
5.11. Home fixed telephone lines connected to general use telecommunication network (graphic).....	88
5.12. Main indicators of general use intercity communications	88
5.13. Main indicators of cellular mobile telecommunications.....	89
5.14. Mobile cellular telecommunication subscriptions per 1 000 population.....	89
5.15. Development of cable television.....	90
5.16. Internet subscribers and users per 1 000 population (graphic)	90
5.17. Subscribers and users of data transmission network	91
5.18. Access to Internet by households from home computers	92
5.19. Public access to Internet in 2013 (graphic).....	92
5.20. Distribution of Internet users by frequency of access in 2013	93
5.21. Distribution of Internet users by the main place of access in 2013.....	94
6. Production, exports and imports	
6.1. Production of selected types of transport vehicles.....	95
6.2. Manufacture of tyres.....	95
6.3. Production of communication apparatus.....	95
6.4. Exports of transport vehicles.....	96
6.5. Imports of transport vehicles.....	96
6.6. Imports of major communication apparatus.....	96

	Pg.
6.7. Electricity consumption by transport and communications organisations	97
7. Tariffs	
7.1. Freight tariff indices.....	98
7.2. Price / tariff indices of passenger transportation services.....	98
7.3. Tariff indices of selected communication services	99
8. Environmental protection	
8.1. Air polluting emissions from mobile sources by selected ingredients	100
8.2. Air polluting emissions from mobile sources by selected ingredients per person (graphic)	100
9. Finance	
9.1. Expenditures of the consolidated budget of the Republic of Belarus on development of transport and communications	101
9.2. Revenues from sales of products, goods, works and services per typical worker	101
9.3. Ratio of growth rates of revenues from goods, products, works and services sold per typical worker to growth rates of nominal gross average monthly wages and salaries.....	102
9.4. Net profit / net loss (-) of transport and communications organisations	102
9.5. Profitability of products, goods, works and services sold by transport and communications organisations	103
9.6. Profitability of sales of transport and communications organisations	103
9.7. Loss-making transport and communications organisations	104
9.8. Share of loss-making transport and communications organisations in total number of transport and communications organisations	104
9.9. Total net loss of loss-making transport and communications organisations	105
9.10. Status of accounts of transport organisations	105
9.11. Status of accounts of communications organisations	106
9.12. Number of transport and communication organisations with overdue debt as of January 1, 2014.....	107
9.13. Structure of production costs of production of products (works, services) of transport and communications organizations.....	108
9.14. New fixed assets introduction and fixed assets disposal rates of transport and communications organizations	109
9.15. Share of accumulated depreciation in the original value of fixed assets of transport and communications organisations	109
10. International comparisons	
10.1. Length of railway tracks (length of operating railway tracks)	110
10.2. Passenger turnover of railway transport	111
10.3. Freight turnover of railway transport	113
10.4. Length of motor roads.....	115
10.5. Passenger cars.....	116
10.6. Passenger cars per 1 000 population	117
10.7. Availability of mobile telephones.....	119
10.8. Fixed telephone lines connected to general use telecommunication network	120
10.9. Number of Internet users.....	121

Methodological notes

Gross Domestic Product (GDP) characterises the value of goods and services produced in the country by all kinds of economic activity and intended for final consumption, accumulation and net exports.

Production account records transactions directly referred to the production process.

Resources show output of goods and services, use reflects intermediate consumption of goods and services. This account defines gross value added which is a difference between output and intermediate consumption. The term "Gross" means that the value added includes the value of fixed capital consumed in the process of production.

Generation of income account reflects the distribution transactions directly linked to the production process. The resource side of the account records the GVA. The use side reflects compensation of employees, taxes on production and imports less subsidies, gross profit and gross mixed income.

Labor productivity is an indicator of the efficiency of production, which characterizes the gross domestic product (gross value added) per unit of labor. At the level of economic activity the labor productivity is calculated as the ratio of gross value added to those employed in this type of economic activity.

Fixed assets are part of the national wealth, created in the manufacturing process, repeatedly or continuously in an unchanged tangible form are used in the economy during a long time, gradually losing its value.

The data on the fixed assets in the section "Transport and Communication" for 2005-2010 are given according to OKONH, since 2011 – according to OKED.

Fixed assets are part of the national wealth, created in the manufacturing process, repeatedly or continuously in an unchanged tangible form are used in the economy during a long time, gradually losing its value. The data on the fixed assets in the section "Transport and Communication" for 2005-2010 are given according to OKONH, since 2011 – according to OKED.

Fixed capital investments represent total costs invested in acquisition, reproduction and creation of new fixed assets.

According to the line of fixed assets reproduction fixed capital investments are distributed as expenditures on construction, reconstruction, modernization and restoration of projects leading to the increase in the initial value of projects.

Data on fixed capital investments are reflected in the amount of actually used volume irrespective of date of payment excluding advance payments.

Labour and labour remuneration

Nominal gross average monthly wages and salaries are calculated through dividing gross wage fund including income tax and employees' individual compulsory insurance fees by the average payroll number of employees, taken for calculation of average wages and salaries, and by the number of months in the period.

Payroll number of employees covers all persons having concluded labour agreements (contracts) and performing permanent, temporary, or seasonal work. The payroll number of employees includes both those who actually worked and those who were temporarily absent from work because of certain reasons (holidays or vacations, leaves initiated by the employer, temporary disability, etc.). The payroll number of employees excludes external multiple jobholders and persons working under civil law contracts.

Average monthly payroll number of employees is calculated by adding together the payroll number of employees for each calendar day of the reference month and dividing the sum by the number of calendar days of the month. **Average payroll number of employees for the corresponding period** is calculated by adding together the average monthly payroll number of employees for all months of the reference period and dividing the sum by the number of months of the period. The average number of employees for the corresponding period excludes persons on maternity leave, in connection with adoption of a child aged under 3 months, on child care leave until a child reaches 3 years.

Job entrants include persons taken on the staff of an organisation in the reference period by the order (direction) of the employer concerning acceptance for employment.

Job leavers include all workers who have left jobs at organisations irrespective of the cause of labour contract termination, their discharge or transfer being confirmed by the order (direction).

TRANSPORT

In-use length of general purpose railway tracks is a length of railway tracks of Belarusian Railways (in kilometres) measured along the axis of the main line track; for multi-track lines it is the length of the shortest main track between the axes of operation points (stations, side tracks, passing stations).

Public motor roads comprise roads for any person with regard to requirements of the legislation of the Republic of Belarus. The length of the streets is included in the length of public motor roads on the territory of the republic since 2012.

Hard surface roads include: improved surface roads (cement concrete, asphalt concrete, crushed stone and gravel treated with binding materials), as well as crushed stone, gravel and bridge surfaces.

Length of operating passenger tramway track (trolleybus line) in two-way terms reflects a length of a track (line) designed for movement of passenger wagons (cars) on routes including crossroads and turning circles.

In-use length of metro tracks is a length of a main track, measured between the axes of stations, calculated in two-way terms.

Main pipeline transport (further called pipeline) is a mode of transport designed to transport a production, prepared in accordance with requirements of technical regulatory legal acts in the field of technical rate setting and standardization, by main pipeline from an acceptance point to a delivery point, transfer to other pipelines, to a different mode of transport or storage. Pipeline is used for transportation of oil, natural gas, petroleum (associated) gas, other liquid and gaseous hydrocarbons, oil products (further called production).

Length of main pipelines is a sum of line lengths of all pipeline sections in single-line terms including branch lines.

Density of public motor roads is a length of public motor roads in kilometres per a unit of area (commonly 1000 square kilometres) of a country or a region.

The intensity of freight and passenger transportation on motor roads is determined by dividing the freight transportation (passenger transportation) in tonne-kilometers (passenger-kilometers) per unit of length (per 1 kilometer) of motor roads.

Air polluting emissions refer to the ingress of contaminants into the atmospheric air from sources of emission.

Mobile sources of emission are transport vehicles and self-propelled machines equipped with engines, the operation of which results in air polluting emissions.

Air polluting emissions from mobile sources are recorded by selected substances (ingredients).

Freight and passenger transportation

Freights transported (volume of freight transportations) is a quantity of freights in tonnes carried by rail way, motor road, air, inland water and pipeline transport.

Freight transportations by motor road transport reflect data on commercial freight transportations performed by organisations, for which a kind of economic activity is an activity of motor road freight transport, as well as by individual entrepreneurs carrying freight transportations by motor road transport.

Freight transportations by motor road transport of specialized organisations reflect data on commercial freight transportations performed by transport of organisations, for which a kind of economic activity is an activity of motor road freight transport.

Freight turnover is a volume of work of transport to carry freights. Measuring unit is tonne-kilometre, i.e. movement of 1 tonne of freight over a distance of 1 kilometre. It is calculated by summation of products of each lot weight in tonnes by the distance of its transportation in kilometres.

Since 2011 the data on individual entrepreneurs carrying freight transportations are included in the volume of freight transportations and freight turnover by motor road transport.

Passengers transported (volume of passenger transportations) is a number of passengers transported over a certain period of time. Data on passenger transportation include passengers with a right to free travel.

Passenger transportations by general purpose railway transport are carrying out by the following types of service:

urban - transportation within Minsk City, the regional center and beyond, but not beyond the railway stations (local stations) located in the satellite towns;

regional - transportation within the administrative boundaries of the region and beyond to the railway stations (local stations) located in the nearby city of regional subordination related field, but not beyond its regional center;

Interregional - transportation between Minsk City and regional centers, and also between regional centers.

Depending on the train speed and stops in the villages, regional and interregional lines are divided into business class and economy class trains.

Passenger turnover is a volume of work of transport to carry passengers. Measurement unit is a passenger-kilometre, i.e. transportation of a passenger over a distance of 1 kilometre. It is calculated by summing up the number of passengers for each transportation type multiplied by transportation distance measured in kilometres.

Production transportation is the movement of production through main pipelines from the place of its acceptance from the supplier to the point of delivery to consumer.

Main pipeline transport turnover is a volume of work to transport production (oil, oil products and gas) via main pipelines. It is defined as a sum of productions of volumes of production accepted at the border of the Republic of Belarus in gross tonnes (cubic metres) and of transportation distance in the territory of the Republic of Belarus to a filling point, oil depot, oil refinery, gas distribution system.

Transport accident rate

Road traffic safety is a state of road traffic ensuring the lowest probability of danger for traffic and of a road traffic accident.

Road traffic accident (further called RTA) is an accident involving at least one moving automotive vehicle which resulted either in human death or injury.

Persons killed in road traffic accidents refer to persons who died from injuries at the scene of a road traffic accident or within 30 days after the accident had happened provided there is a document supported cause and effect relationship between fatality and the road traffic accident.

Persons injured in road traffic accidents refer to persons who sustained bodily injuries during the accident, resulting in loss of labour capacity or either in a need for hospitalization or in administration of outpatient treatment at least for one day following the first medical aid. Where necessary administration of outpatient treatment is confirmed by documents (certificates) issued by medical institutions.

COMMUNICATIONS

Revenue from communication services refers to revenue accrued for total volume of provided communication services according to actual tariffs for the reference period (irrespective of time of payment for services).

Postal service is a type of communications related to a unified production process complex of technical equipment and transport vehicles providing receipt, processing, storage, transportation and delivery of postal items as well as providing other postal services.

Telecommunications are a type of communications related to any emissions, transmission or receipt of signs, signals, voice information, written text, pictures, sounds or other messages via a radio system, wire-connected, optical or other electromagnetic systems.

Data transmission services are telecommunication services of receipt, transmission, processing and storage of data.

Permanent Internet access services are data transmission services of organisation of permanent connection between telecommunication service user terminal equipment and Internet.

Telematic services are telecommunication services of receipt, transmission, processing and storage of telematic service messages.

Television programme broadcast services are television transmission services of television programme broadcasting for a wide range of geographically distributed telecommunication service users.

Mobile cellular telecommunication services are telecommunication services provided to telecommunication service users by telecommunication carriers via mobile cellular telecommunication network.

Mobile cellular telecommunication subscriptions comprise users of mobile cellular telecommunication services who concluded contract on the provision of such services with the assignment of a subscriber number or a unique identification code.

Fixed telephone lines connected to general use telecommunication network include telephone lines connected to the network of the national telecommunication operator and lines connected to technological telecommunication networks linked to general use telecommunication network. The total number of telephone lines includes main (individual and coupled), bridging, installed in the same line, one-way apparatus with the use of payphone number, powered using radio extender, payphones, included in the network of the Ministry of Communications.

Home telephone lines – telephones installed in apartments (dwelling houses) are distinguished separately.

PRODUCTION, EXPORTS, IMPORTS

Manufacture of industrial products in physical terms is measured, as a rule, by recording the gross output of products, i.e. including products used for own industrial needs as well as manufactured from customer-furnished raw materials.

Customer-furnished raw materials are raw materials which belong to customers and are transferred to other organisations to be processed under contracts concluded.

Export of goods is shipping of goods from the territory of the Republic of Belarus which subtract from the stocks of material resources of the country.

Import of goods is entry of goods in the territory of the Republic of Belarus which add to the stocks of material resources of the country.

TARIFFS

Price (tariff) indices for passenger transport services are calculated based on registration of prices (tariffs) for representative services for selected number of organisations, individual entrepreneurs, providing passenger transportation services. Price (tariff) indices for passenger transport service characterise the change in price (tariff) level for passenger transportation over time.

Freight tariff indices allow for estimation of changes in freight tariffs in the current period irrespective of changes in the structure of freights transported by various characteristics, i.e. freight type and size of consignment, delivery speed, hauling distance, territory of transportation, type of rolling stock, utilisation rate of load carrying capacity, etc. For each mode of transport, tariff of the representative service is recorded. Transporting one tonne of the most bulk freight over a specified distance is referred to as a representative service of freight transportation by different modes of transport. Revenues of the particular mode of transport from freight transportation over the base period are used as weights.

Tariff indices of communication services provided to natural and legal persons and individual entrepreneurs are calculated in accordance with communication tariffs for selected kinds of representative services. To calculate tariff index of communication services, revenues from general use communication services by type of communications are applied as weights.

FINANCE

Data on financial results of transport and communications organisations refer to legal entities and their separate subdivisions having an individual balance.

Budget is the main financial plan of formation and spending of monetary resources enabling the state bodies to fulfill their tasks and functions.

The budgetary system of the Republic of Belarus includes, as independent parts, the republican budget and local budgets.

Consolidated budget is the code of budgets on the corresponding area, excluding interbudgetary transfers, budgetary credits and interests on it.

Budget expenditures are money resources for providing financing tasks and functions of the state. Expenditures are determined by the programme of the socio-economic development of the Republic of Belarus, its administrative territorial units and by ratio of fiscal capacity. The items and the amounts of these expenditures are determined by the Law on the Republican Budget and decisions of local Councils of Deputies on the budget for the next fiscal (budgetary) year. The fiscal (budgetary) year in the Republic of Belarus starts on January 1 and ends on December 31 of a calendar year.

Effective debt of organisations includes accounts payable and liabilities on credits and loans.

Accounts payable are debts to suppliers and contractors for tangible assets received, works done and services provided; on advance payments received; with affiliated organisations, with employees on wage payments, with budget and extrabudgetary funds, and other creditors.

Accounts receivable are liabilities of buyers and customers for goods, works and services; on bills of exchange received; with affiliated organisations, budget, personnel, and other debtors (including debts of accountable entities, advance payments granted to suppliers and contractors, and of other debtors).

Profitability of goods, products, works and services sold is calculated as the ratio of profit from sales of goods, products, works and services to the net cost of goods, products, works and services sold. A negative financial result from sales of goods, products, works and services means operating at a loss.

Profitability of sales is defined as the ratio of profit from sales of products, goods, works and services to the proceeds from sales of products, goods, works and services. When the financial result from sales of products, goods, works and services is negative, unprofitability takes place.

Net profit or net loss is the amount of financial results from activities of organisations in a reference period.

Data for 2005 are given according to OKONH; since 2009 – according to OKED

Loss-making organisation is an organisation which made a net loss in the reference period.

1. MAIN ECONOMIC INDICATORS OF TRANSPORT AND COMMUNICATIONS ORGANISATIONS

1.1. Main socio-economic indicators of transport and communications organisations¹⁾

Telephone sets; videophones	68,9	111,5	80,3	84,6	69,3	73,2

6.4. Exports of transport vehicles

	2005	2009	2010	2011	2012	2013
Freight cars, units	158	20	30	190	1 168	920
Trucks, thous. units	13,2	3,0	6,9	11,8	15,2	10,9
Truck tractors, thous. units	6,0	1,2	2,6	6,9	7,0	3,3
Trailers and semi-trailers, thous. units	34,0	10,2	10,6	19,9	12,9	12,3
Special purpose vehicles, units	1 161	264	387	794	917	1 230
Transport vehicles for carrying 10 and more persons, units	583	568	1 316	1 480	2 105	1 606

6.5. Imports of transport vehicles

	2005	2009	2010	2011	2012	2013
Railway locomotives, units	3	5	12	5	22	15
Passenger coaches, units	84	81	51	27	64	21
Freight cars, units	1 733	737	751	1 754	4 543	113
Trucks, thous. units	7,7	9,7	6,0	5,4	14,5	34,3
Truck tractors, thous. units	0,4	0,4	1,3	1,9	4,1	4,7
Trailers and semi-trailers, thous. units	19,3	57,8	116,5	96,7	132,8	198,4
Special purpose vehicles, units	415	1 100	458	259	429	1 141
Passenger cars, thous. units	131,3	163,4	201,8	284,1	83,7	102,5
Transport vehicles for carrying 10 and more persons, units	1 322	362	667	434	1 054	1 620

6.6. Imports of major communication apparatus

(million U.S. dollars)

	2009	2010	2011	2012	2013
Communication apparatus	157,2	246,4	215,8	249,9	434,8
mobile telephones	39,7	99,6	97,0	132,8	224,1
telephone apparatus	4,8	6,9	6,3	9,9	9,5
Transmission apparatus for radio and television broadcasting	16,9	25,3	25,7	44,5	57,1
Fibre optic cable	2,2	2,6	5,5	4,6	4,6

6.7. Electricity consumption by transport and communications organisations

(million kilowatt-hours)

	2009	2010	2011	2012	2013
Total transport	1 603	1 729	1 684	1 611	1 533
of which:					
railway	577	622	616	620	599
of which for train traction	434	478	473	478	462
bus	138	132	128	125	119

trolleybus	95	94	86	83	77
metro	93	97	96	98	115
inland water	3	3	3	3	3
air	9	9	8	2	2
taxi	0,0	1	1	1	0,0
main pipelines	596	685	672	607	539
of which:					
oil transportation	453	474	445	345	285
gas transportation	137	177	181	211	207
Communications	270	293	350	352	367
Percentage share of transport and communications organizations in total country's electricity consumption	5,4	5,4	5,4	5,1	5,1

7. TARIFFS

7.1. Freight tariff indices

(December to December of previous year; percent)

	2005	2009	2010	2011	2012	2013
Total transport	106,4	118,2	130,0	250,3	143,0	115,2
of which:						
pipeline	100,0	70,0	180,1	199,3	175,9	114,7
railway	107,3	138,9	115,8	281,1	124,3	115,4
motor road	108,6	107,7	117,5	206,9	150,7	114,8
inland water	108,7	105,6	107,9	190,0	100,0	133,0
air	99,0	133,5	104,7	277,5	102,9	115,1

7.2. Price / tariff indices of passenger transportation services

(December to December of previous year; percent)

	2005	2009	2010	2011	2012	2013
Total passenger transportation services	115,2	109,1	114,2	205,6	127,3	152,4
of which:						
urban	132,4	100,0	119,1	183,9	128,1	188,4
motor road						
suburban	123,8	100,0	115,4	187,9	120,0	156,3
inter-urban	120,0	99,8	114,2	201,2	134,5	135,8
passenger transportation by taxicabs	113,9	102,5	107,3	219,6	146,3	126,7
railway						
by economy class train of regional lines	120,0	94,5	100,0	113,7	120,0	150,2
Interregional lines	110,0	99,3	121,4	100,4	120,3	183,0
international	91,5	139,9	115,3	295,1	131,9	118,4
air	107,5	133,7	97,8	262,1	104,2	115,1

7.3. Tariff indices of selected communication services

(December to December of previous year; percent)

	2005	2009	2010	2011	2012	2013
For legal persons and individual entrepreneurs						
Communication services	106,7	102,4	101,8	138,6	131,2	111,0
of which:						
mail service	102,8	105,6	103,5	113,8	116,6	123,4
local telephone service	111,9	106,2	100,9	184,9	119,0	114,2
intercity and international telephone service	114,5	100,7	100,2	144,4	141,1	105,9
wire broadcasting	117,2	118,1	117,6	150,0	120,0	111,1
For natural persons						
Communication services	107,3	107,3	101,2	139,0	138,5	142,4
of which:						
mail service	115,4	117,0	110,9	165,1	167,9	188,3
local telephone service	112,1	107,2	106,7	158,2	120,0	139,1
intercity and international telephone service	113,6	100,7	100,7	146,9	150,9	124,0
wire broadcasting	122,6	120,4	123,1	125,0	120,0	133,3

8. ENVIRONMENTAL PROTECTION

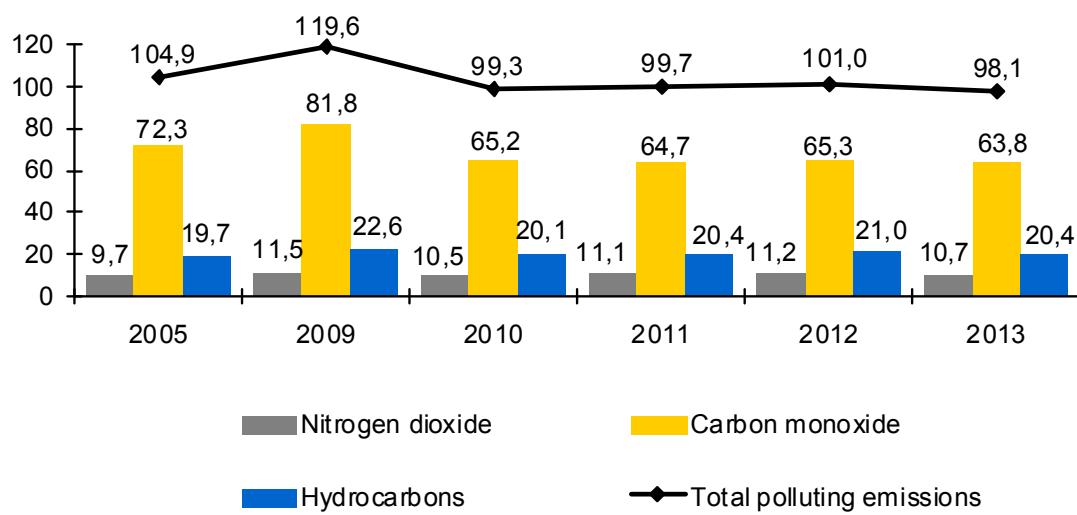

8.1. Air polluting emissions from mobile sources by selected ingredients

(thousand tonnes)

	2005	2009	2010	2011	2012	2013
Total air polluting emissions of which:						
carbon monoxide	698,7	777,8	619,1	612,8	618,2	604,4
hydrocarbons	190,0	214,4	190,8	193,4	198,5	192,7
nitrogen dioxide	94,2	109,7	99,9	104,9	105,7	101,7
sulfur dioxide	1,3	1,3	2,6	2,7	2,7	0,3
soot	29,7	34,0	29,8	30,5	30,8	29,3
benzpyrene, tonnes	0,8	0,9	0,8	0,8	0,8	0,7
Percentage share of polluting emissions from mobile sources in total air polluting emissions	72	71	71	72	69	68

8.2. Air polluting emissions from mobile sources by selected ingredients per person

(kilogrammes)

¹⁾ Data of the Ministry of Natural Resources and Environmental Protection of the Republic of Belarus.

9. FINANCE

9.1. Expenditures of the consolidated budget of the Republic of Belarus on development of transport and communications

(billion rubles)

	2009	2010	2011	2012	2013
Total consolidated budget					
transport	989,9	1 374,3	1 891,1	2 865,9	3 854,3
communications	192,4	138,9	148,9	114,8	81,8
of which:					
republican budget					
transport	91,2	261,6	380,1	290,6	237,3
communications	192,4	138,9	148,9	114,8	81,8
local budgets					
transport	898,7	1 112,7	1 511,0	2 575,3	3 617,0

9.2. Revenues from sales of products, goods, works and services per typical worker

(million rubles)

	2011	2012	2013
Total transport	270,6	452,5	480,3
of which:			
railway	98,5	197,5	249,5
bus	93,8	122,4	166,1
trolleybus	43,6	71,6	104,3
freight motor road	151,7	265,8	324,5
